Jeremy Wohlers, CDT
Training Service Manager

Jeremy Wohlers, CDT is a talented technician and international lecturer. He has been active in the dental business for over 16 years, working in both the clinical and laboratory aspects. Jeremy grew up working in his father's small dental practice, giving Jeremy a unique perspective on what Doctors need from the lab technicians to provide the highest quality product to the patient. He is currently a member of five prosthetic study clubs which range in focus from traditional prosthetics to implant prosthetics. Jeremy traveled to Germany to work closely with Master Technician Frank Poerschke and Merz Dental in the development of several new products. In 2013, he was certified as a Merz and Hi-Tec Instructor and is a strong advocate of technology.

Jeremy specializes in esthetic, removable, CAD/CAM designed titanium bars and attachments for removable partial denture/fixed partial denture combination cases. His background in highly esthetic removables, implant and CAD/CAM technology, combined with his techniques and teaching methods, have made Jeremy a great resource for technicians preparing for tomorrow’s dentistry.

Core3daCADemy™

Already a world-wide market leader in providing the latest in digital technology, our new Core3daCADemy™ education programs and Core3dStudyClub provide the matching full range of CE and accreditation opportunities that can advance and differentiate your Digital skills and abilities. Offered on-site in our Las Vegas based facilities (and off-site at your laboratory or via a variety of dental organizations), we are bringing one of the most comprehensive and effective packages of product and educational support to the dental laboratory market today.

HI-TEC DENTAL PRODUCTS, INC.

Hi-Tec Dental Products, Inc has been serving the dental industry for over 25 years as a gypsum manufacturer, dental supply house, and a fully stocked tooth counter. In the last 10 years, Hi-Tec Dental has focused on offering unique educationally based programs and higher quality materials to the dental community. Our goal is to offer the dental professional superior products, services, and training for the materials that we offer.

Presents
A Step-by-Step Guide
to Immediate Full Arch Rehabilitation

Two Day Course
Kennesaw, GA, USA
December 5 & 6, 2014
What You Will Learn

Implant-based dentistry has become the fastest growing market segment in the dental marketplace today across North America and around the world. In only one recent example, the American Association of Oral and Maxillofacial Surgeons determined that, of adults ages 35 to 44, 69% have prematurely lost one permanent tooth and 26% will be fully edentulous. Your dentist clients are taking notice! As more and more practices incorporate implant dentistry, Core3daCADemy ensures you are ready to embrace this trend and catch the wave!

This two day, hands-on, digital design course will teach you all the steps from start to finish, outlining a predictable process for restoring a full arch - covering both the provisional stage and the final prosthetic.

As with all of our Core3daCADemy programs, our goal is to assist you in obtaining the best return on your investment. There is no greater opportunity than offering Digital Implant Laboratory Services.

Don’t delay in Registering!
Space is limited to 20.
