1. Introduction

On 28 November 2013 Barnet and Chase Farm Hospitals NHS Trust (“the Trust”) was notified of information relating to Jimmy Savile (“JS”) and Barnet General Hospital (“BGH”) a predecessor hospital that had been incorporated into the Trust.

The Trust was advised that 13 investigations were already underway relating to NHS hospitals but the Department of Health (“DH”) established that the Metropolitan Police Service (“MPS”) held further information regarding JS and NHS organisations. As well as identifying information about the hospitals where investigations were already underway, information had also come to light relating to new hospitals. In each case where there was information relating to JS and a hospital, responsibility rests with the particular Trust to investigate any issues as appropriate. As the Trust was one of these, the Trust Board commissioned an investigation into JS’s activities at BGH.

The incident that was reported related to a lady who remembered being a patient on an orthopaedic ward at BGH in 1985¹. She described having a conversation with the nurses in which they allegedly said they spied on JS and observed him having sex with a dead body.

The investigation was led by Fiona Smith, Chief Operating Officer, who established an investigation team as follows (see appendix A for biographies of the investigation team):

- Alison Macdonald, Board Secretary
- Marcia McKnight, Head of Communications
- Angela Heins, General Manager Pathology Services
- Elizabeth Bodell, Medical Records Manager
- Lisa Crawley, Administrative Support

The investigation reported to the Trust Board through the Executive Committee, chaired by the CEO. The report was reviewed and approved by the Trust Board before publication.

The Trust engaged Capsticks Solicitors, LLP to provide legal assurance of the investigation. Capsticks provided advice, support and guidance throughout the investigative process, from inception to the report’s publication.

Fiona Smith attended, with Capsticks, all DH oversight meetings.

¹ The MPS report documented that the incident occurred in 1983 but the lady subsequently clarified that it occurred in 1985

2. Terms of Reference

The Trust Board were made aware of the allegations at its meeting on 12th December 2013. It commissioned the investigation into the allegations and adopted the following Terms of Reference for the investigation.

2.1 Internal Investigation into matters relating to Jimmy Savile

The Trust, under its general responsibilities for oversight of the organisation, has commissioned an investigation into JS's association with BGH under the management of the Trust as a predecessor body, following allegations made in relation to JS's activities at the hospital in 1983.

The Trust will:

- Thoroughly examine and account for Jimmy Savile's association with BGH.
- Investigate complaints and incidents concerning JS's behaviour at BGH including: where the incident occurred, who was involved, what occurred, whether the incident was appropriately reported, investigated and addressed at the time and, if not, the reasons for this.
- The investigation does not have the power to impose disciplinary sanctions or make findings as to criminal or civil liability: where evidence is obtained of conduct that indicates the commission of criminal and/or disciplinary offences, the police and/or relevant employers will be informed.
- Consider the access arrangements and any privileges accorded to Jimmy Savile, the reasons for these and whether they were subject to usual or appropriate supervision and oversight.
- Consider the extent to which any such special access and/or privileges and/or lack of supervision and oversight resulted from JS's celebrity, or fundraising role within the organisation.

- Review relevant policies, practices and procedures which were in place during his association with BGH and compliance with these.
- Where complaints or incidents were not reported, or not investigated, or where no appropriate action was taken, consider the reasons for this including organisational culture and practices and the part played, if any, by Jimmy Savile's celebrity or fundraising role within the organisation.
- In the light of findings of fact in respect of the above, consider whether the Trust's current safeguarding, complaints, whistle blowing and other policies and processes relating to the matters mentioned above are fit for purpose.
- The investigator is expected to produce a written report with recommendations for future actions
- The first draft report will be presented to the Trust Board in advance of submission to Verita on 21 February 2014
- The final outcome of the investigation will be published following review. The findings will be considered as part of Kate Lampard's review¹. Publication dates will be co-ordinated by the DH
- The investigation team will work closely with Verita who will review the report.

3. Executive Summary and Recommendations

The Trust was notified of an allegation made by a member of the public to Operation Yewtree that linked JS to BGH. The MPS record of the phone call they made to the witness was that she recalled a conversation with nurses at BGH when she was a patient there in

¹ In December 2012, Kate Lampard was invited by the Secretary of State for Health to oversee three investigations at Leeds Teaching Hospitals NHS Trust, Buckinghamshire Healthcare NHS Trust and Broadmoor Hospital with whom JS was closely associated. Kate Lampard is a former practising barrister, former Deputy Chair of the Financial Ombudsman Service and also has significant experience of NHS procedures and practices. Kate Lampard is providing general assurance relating to all NHS investigations.

1983. In that conversation the nurses told the witness that JS “liked to have sex with dead bodies”.

The witness no longer lives in London and was therefore interviewed over the telephone on 14th January 2014. The witness kept diaries and was able to retrieve notes made at the time of the incident. She remembered being a patient on an orthopaedic ward in 1985. This date is different to the report given to the Trust from the MPS. She described having a conversation with the nurses in which they allegedly said they spied on JS when they worked at another hospital and observed him having sex with a dead body. The witness confirmed that this was not something that happened at BGH and she thought that it had happened at Stoke Mandeville Hospital, but could not be certain of that.

The witness granted access to her medical record for the purpose of confirming the timeline for investigation and in order to identify the nurses caring for the witness. The Trust was unable to identify the nurses, however the medical record did confirm the witness was at the hospital at the time she said she was.

The investigation undertaken by the Trust could find no record of JS being involved with BGH, either through fund raising events, VIP visits or charitable donations.

The Trust also examined current policies and procedures and determined them to be robust enough for the purposes of the protection of children and vulnerable adults.

The Trust has therefore concluded that there is clear evidence that:

- The conversation reported by the witness happened at BGH, however the incident of JS having sex with dead bodies did not happen at BGH.
- That it is likely that the conversation with the nurses happened as the witness said it did however the details of the incident described are hearsay as they were not directly witnessed by the patient who reported the incident.
- That the witness cannot be clear in identifying the actual hospital where the alleged incident occurred.
- That the Trust could not identify the nurses from the patient’s records and therefore could not interview them to corroborate the allegation.

The Trust has closed the investigation and has used its volunteer procedure to develop a policy to clarify what is required in order for volunteers to be recruited and permitted to work in the Trust.

4. Approach to the Investigation

Fiona Smith acted as the investigation lead. She appointed the investigation team and established an investigation working group meeting under the terms of reference approved by the Trust Board.

The DH's "Investigating allegations and information about Jimmy Savile at NHS hospitals" GUIDANCE PACK (November 2013), was referred to throughout the investigation. The lead investigator attended all JS investigation meetings at the DH. The Trust appointed Capsticks LLP solicitors to provide legal advice and oversight of the investigation and report.

The investigation was publicised on the Trust Board website following the Trust Board meeting.

The investigation team members were chosen by the lead investigator as individuals who would have sufficient experience to access the information that related to the specific allegations outlined in the MPS report.

The board secretary acts as the Trust archivist and is secretary to the Trust Charity Committee. She confirmed that there were no Board or Committee papers surviving from the 1980's, and made contact with the charity commission to establish any connection with JS. The Medical Records manager was responsible for tracing and accessing the witness's medical records. The General Manager for Pathology Services accessed Mortuary Records to determine whether there was any evidence of JS attending the mortuary. The Head of Communication accessed media archives, including hospital newsletters to look for JS activities. Other research activities of the group included investigating staff records from the period and examining archives for policies and procedures relating to VIP visitors or volunteering. Appendix B lists the documents that were reviewed during the investigation.

The investigation team identified two members of the League of Friends who were active members within BGH during the 1980's (see appendix C). They were contacted and questioned about any potential JS activities at BGH. The investigator who questioned the

gentlemen made a note of their responses and has subsequently confirmed the accuracy of these with them.

Fiona Smith contacted the witness and interviewed her on 14th January 2014. Fiona Smith confirmed the accuracy of the meeting notes she had taken with the witness. The findings of the report will be shared with the witness prior to publication.

5. JS's Association with The Trust

BGH is a predecessor hospital that was incorporated into the Trust on 1st April 1999.

Following an extensive search of Trust and public archives the investigating team found no record of JS being involved with BGH, either through fund raising events, VIP visits or charitable donations. There was no media coverage of JS attending BGH and no coverage of any involvement at the hospital in staff newsletters at the time.

The two witnesses interviewed, one of whom had been an active member of the League of Friends over the past 50 years, did not recollect any involvement by JS in BGH.

The team found no evidence of any access arrangements or privileges accorded to JS at BGH.

6. Historic Review of Policy, Practice and Procedures

BGH was incorporated into the Trust in 1999. The investigating team could find no archived policies and procedures relating to the predecessor Trust that would have provided insight into practice at the time of the alleged incident.

The investigating team did not attempt to trace anyone who worked in the hospital at the time as no staff records could be found and the lead investigator did not consider further attempts proportionate given the allegation.

7. Investigation of Current Allegations

The Trust was notified of an allegation made by a member of the public to Operation Yewtree that linked JS to BGH. The MPS record of the phone call with the witness was that she recalled a conversation with nurses at BGH when she was a patient there in 1983 in which the nurses told her that JS “liked to have sex with dead bodies”.

The witness who reported the allegation to Operation Yewtree no longer lives in London. She was therefore interviewed over the telephone on 14th January 2014 by Fiona Smith. The witness was helpful and described how she kept diaries all her life. She was able to retrieve notes from the diaries to assist her in detailing her recollection of the events she felt she needed to report. The witness remembered being a patient on an orthopaedic ward in 1985 (This conflicted with the report from the MPS where the date was recorded as 1983). She explained that she was sitting up late one night with the nurses at the nurses’ station as she could not sleep. She described that there had been a press story that had just come out about JS in relation to some kind of sexual allegation. The nurses and the witnesses were having a general conversation about how JS was a “creepy man”. The witness recounted a story to the nurses about her daughter who collected autographs and she remembered going to an event with her daughter and her daughter asking if she could get JS’s autograph. JS’s minder said “yes if you let her come with me I will get the autograph”. The witness said at the time “she is not going anywhere without me”. The nurses then said “you are quite right that he gives you the creeps, when we worked at X hospital (the witness thinks the hospital may have been Stoke Mandeville¹) he was allowed access to all areas. We were a bit suspicious of him so one night when we were on duty and we decided to spy on him and followed him through the corridors. When we watched him through an air vent into the mortuary we saw him having sex with a dead body.”

Fiona Smith asked the witness to repeat the story, and on further questioning confirmed that although the conversation with the nurses happened at BGH the incident of JS having sex with dead bodies had not. She said that it had possibly happened at Stoke Mandeville Hospital although she could not be positive about this fact.

The witness granted access to her medical record for the purpose of confirming the timeline for investigation and in order to identify the nurses caring for the witness. The medical records were located and confirmed that the witness had been a patient on an orthopaedic ward at the time she remembered. On close examination of the record the Trust was unable

¹ This information was relayed to Stoke Mandeville by the lead investigator at a JS investigation meeting at the DH.

to identify the nurses as they had only initialled rather than signed their full names. Staff records for the predecessor hospital were not found in the corporate archive to try to identify the nurses against the initials.

8. Current Policies, Practice and Procedures

8.1 Volunteer Recruitment

In Barnet and Chase Farm Hospitals NHS Trust, since August 2010 all new volunteers undergo the following procedure:-

- Application form
- Interview
- Reference checks
- Occupational Health screening
- CRB checks (now Disclosure and Barring service)
- Mandatory training (Infection Control, Child Protection, Vulnerable Adults, Information Governance, Fire Safety, Equality & Diversity, Moving & Handling)
Ward volunteers also undertake food hygiene/handling and eating & drinking training.

Annual update training also takes place for volunteers who have been in place for more than 12 months and records kept.

8.2 Standards for Volunteer Recruitment

It is intended that the recruitment process be as open and transparent as possible. The recruitment of volunteers adheres to the NHS Employers guidelines and the Care Quality Commission (CQC) standards on recruitment.

It is anticipated that the majority of volunteers will come from the local community. This being the case, by being proactive in its recruitment methods, the Trust hopes that volunteers reflect the demographic makeup of the local community.

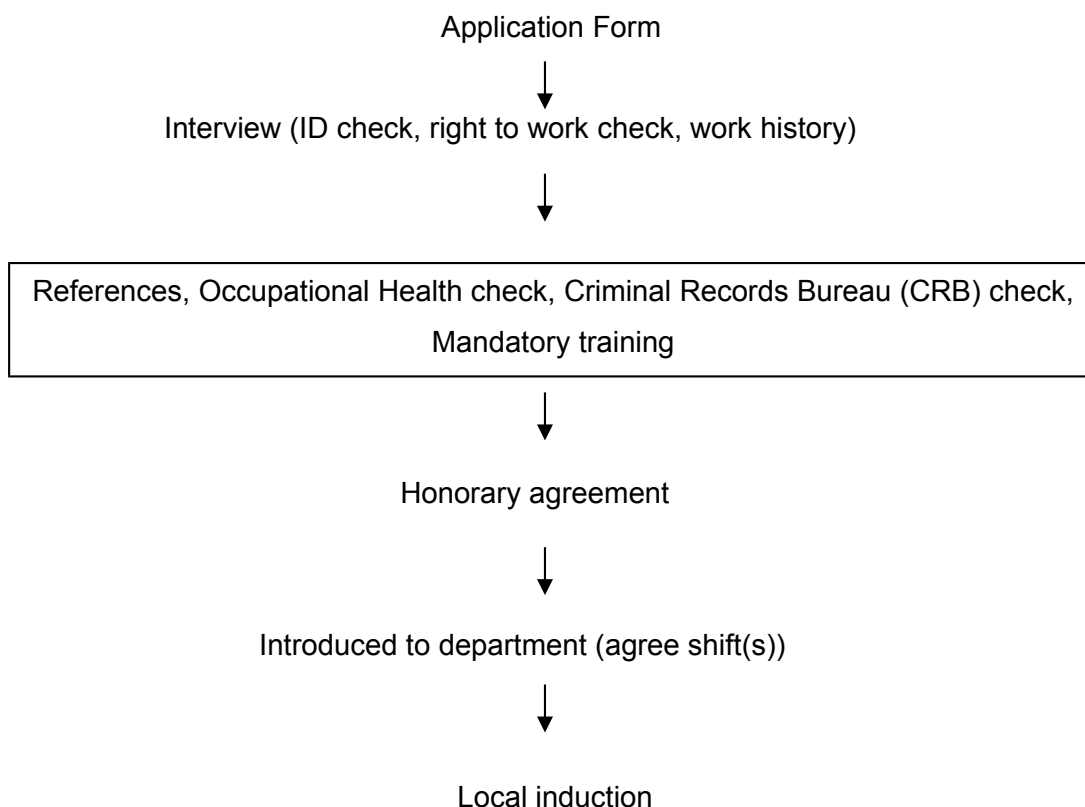

Volunteers are recruited via various methods. This includes advertising/marketing on Trust premises, Trust website, staff news mail, newsletters, promotional literature, presentations to various community groups, local Volunteer Centres and volunteer recruitment websites.

8.3 Volunteer Role Description & Risk Assessment

Volunteers are only recruited for approved roles. Voluntary Role Descriptions and associated risk assessments are to be developed by department/ward managers and forwarded to the Voluntary Services Manager for agreement. It is the responsibility of department/ward managers to update risk assessments on a timely basis and amend these as new risks are identified. Agreed role descriptions may be used as a tool in recruiting potential volunteers.

8.4 Volunteer Application procedure

Enquiries can be made via email, in person or via telephone. Enquirers are provided with information detailing the various voluntary roles available and how to apply.

8.5 Disclosure and Barring Scheme (DBS)

The recruitment and vetting process for volunteers adheres to the standards and guidelines set by the DBS as well as the Trust's policy for recruitment. (See Recruitment & Selection Policy and Manual)

8.6 Occupational Health

Occupational Health screening forms part of the recruitment process. Volunteering must not commence until recruitment checks have been completed satisfactorily in accordance with the Recruitment and Selection Policy.

8.7 Training

All volunteers undertake mandatory induction training prior to commencing any voluntary role in order to ensure the safety and well being to volunteers, patients, staff and members of the public.

Each voluntary role as part of the Risk Assessment will have identified training to be completed in order to manage any risk(s) that have been highlighted.

Records of training undertaken at the Trust's Hospitals must be kept to ensure that the training of volunteers is up to date.

Volunteers are required to attend training additional to mandatory training if it has been deemed appropriate for the voluntary role(s). Failure to attend training as required may result in a suspension of duty or termination of the Honorary Agreement.

Informal training (shadowing, observing) is unlikely to be recorded. As this is likely to take place once volunteering commences and is deemed to be part of the role.

The Voluntary Services Office will notify volunteers of required training. It is the responsibility of volunteers to attend.

To provide a high quality of service to patients and the Trust, it is necessary that volunteers are equipped with up to date skills and information relevant for their respective voluntary roles. Thus it is the responsibility of the Trust to provide adequate training and the responsibility of volunteers to attend/participate.

8.8 Visiting Celebrities

The Trust has a VIP visiting policy that assists staff in managing VIP contact with service users. Celebrities visiting the children's departments are welcome by the Trust as they can enhance the child's experience of hospital, promote well-being and provide distraction and entertainment for sick children and their families. To reduce risk and ensure the safety of the children the following procedures are adhered to.

8.9 Arrangements for Celebrity Visits to All Departments

- Celebrity visits to the Trusts children's departments will be arranged and agreed with the Head of Children's Nursing or Matron prior to attendance.
- The Trust's communication department will be informed of all celebrity visits.
- Patients, children and families will be asked if they wish to meet the celebrity prior to the visit.
- Consent will be obtained in writing if photographs are to be taken.
- Celebrities will be accompanied at all times by a senior member of the team.
- At the end of the visit the celebrity will be escorted from the department by a senior member of the team.

8.10 The Trust's process for children being listened to and how the organisation acts on patient concerns.

8.10.1 Communicating with Children

Listening to children plays an important part in both clinical care and in order to safeguard them. Different skills are required to both listen and communicate appropriately with children and this is why the Trust employs clinical staff who have been specifically trained in children's care. The Trust has also made a training DVD – "Communicating with Children" for all staff. Further methods and techniques utilised to enhance communication with children are detailed below:

- Children's trained nurses are employed in all children's departments and A&E.
- Children admitted to hospital, regardless of speciality, are under the shared care of Paediatricians.
- Play specialists work in all children's areas and support children through therapeutic play, distraction techniques and guided imagery.
- Paediatricians undertake daily ward rounds in all in-patients areas. It is normal practice for staff to talk not only to parents/carers but to the children during these consultations.
- When deemed appropriate, children will be talked to separately from parents, if this is considered in the child's best interests.
- Each child admitted has an allocated nurse.
- A patient experience tracker service is utilised in all children's areas, giving children an opportunity to express their views on the services they have received.

8.10.2 How all patients are listened to and concerns acted on

The Trust provide a comprehensive training program to ensure staff know of the predisposing factors and signs and indicators of child abuse and are able to exercise professional skill for effective information sharing. Listening to children, acting appropriately to a disclosure and identifying indicators of abuse are all issues covered by Trust safeguarding training. Further Trust policies and procedures which enhance safeguarding children and support identification of their concerns are provided below.

- The Trust Safeguarding Children Team includes a Named Nurse, Named Doctors, Named Midwife, and Safeguarding Matron, all of whom are available to children and staff for safeguarding advice and support and who will act on concerns raised by children, carers or staff.
- Trust policy on Managing Allegations of Child Abuse against a member of staff policy, including liaison with the Local Authority Designated Officer
- Comprehensive complaints procedure
- The Trust has a nominated individual responsible for adult safeguarding with Matrons who take specific responsibility.
- PALS service – this team are based at both Trust sites, providing a first point of contact for concerns or complaints and can be accessed by anyone regardless of

age, who is accessing Trust services. PALS can provide further information and discuss options with people about how their complaint can be resolved.

Through the review of current policies and procedures the Trust is satisfied that they are robust enough for the purposes of the protection of children and vulnerable adults. The Trust has a whistle blowing policy that staff can use to report concerns.

9. Overall Analysis and Conclusions

The investigation team found that, although the information recorded by the MPS as told to them by the witness referred to Barnet General Hospital, when the witness was interviewed by the lead investigator it was confirmed that although the conversation reported by the witness happened at BGH, the incident did not happen at BGH.

Fiona Smith found the witness to be clear in her account of the facts as she knew them. The witness's credibility was strengthened through her reference to her diaries which she kept through her life. Her recollection of her time as a patient at BGH was confirmed by her medical record.

The investigation undertaken by the Trust's investigation team found no record of JS being involved with BGH, either through fund raising events, VIP visits or charitable donations. This was also the view of two witnesses who have been involved with the Trust and its predecessor hospitals for over 50 years.

The Trust has therefore concluded that there is clear evidence that:

- The conversation reported by the witness happened at BGH, however the incident of JS having sex with dead bodies did not happen at BGH.
- That it is likely that the conversation with the nurses happened as the witness said it did however the details of the incident described are hearsay as they were not directly witnessed by the patient who reported the incident
- That the witness cannot be clear in identifying the actual hospital where the alleged incident occurred
- That the Trust could not identify the nurses from the patient's records and therefore could not interview them to corroborate the allegation

- That a review of the Trust's current policies determined them to be robust enough for the purposes of the protection of children and vulnerable adults.

10. Recommendations

The investigators recommended that the volunteer procedure is used to develop a policy to clarify what is required in order for volunteers to be recruited and permitted to work in the Trust.

This action has now been completed and a formal policy has been developed that incorporates the procedure to ensure clarity of practice for staff. The policy was been ratified through the Trust's internal governance processes in May 2014.

Appendix A

Investigation Team Biographies

Chair:

Fiona Smith

Chief Operating Officer and Deputy Chief Executive at Barnet and Chase Farm Hospitals NHS Trust since June 2013.

Responsible for the operational delivery of clinical services across the organisation.

Members

Elizabeth Bodell

Interim Head of Health Records at Barnet and Chase Farm Hospitals NHS Trust since January 2012. Responsible for storage and maintenance of both current and archive health records

Marcia McKnight

Head of Communications at Barnet and Chase Farm Hospitals since 2006. Has lead responsibility for fund raising and liaison with Leagues of Friends

Alison Macdonald

Board Secretary, Chase Farm Hospitals NHS Trust since 1999. Is responsible for corporate records and lead for hospital archive.

Angela Heins

General Manager, Pathology since April 20014 and is responsible for Pathology and mortuary services.

Secretarial support

Lisa Crawley

Business Manager to Chief Operating Officer at Barnet and Chase Farm Hospitals NHS Trust since September 2013

2. Charity Commission

An enquiry was made to the Charity Commission about whether it maintained records of organisations or individuals who had benefitted from Fundraising by Jimmy Savile. The Charity Commission dealt with this as a Freedom of Information request and has confirmed that they do not hold records to this level of detail.
