

## **Preventing Pressure Ulcer Leaflet**

The tissue viability team undertook a piece of patient engagement work with existing patients of the tissue viability service to better understand their awareness of pressure ulcers and how they can develop/be prevented.

Feedback and experiences from patients were gathered, along with some more in-depth case studies, and the team have subsequently produced a new pressure ulcer information leaflet for patients and carers providing advice and answers to questions surrounding pressure ulcers.

The leaflet was launched in November 2018.
