Referral criteria for genetic kidney clinic (VHL clinic)

1. Patients with a confirmed diagnosis of a genetic kidney cancer syndrome (eg VHL, BHD, HLRCC, tuberous sclerosis etc)
2. Patients with multiple kidney cancers
3. Patients with kidney cancer and a first or second degree relative with confirmed or likely kidney cancer
4. Patients with a kidney lesion and clinical features suggestive of an underlying genetic cause eg skin lesions or other primary tumour(s)
5. Patients with a relative with confirmed diagnosis of a genetic kidney cancer syndrome or FH deficiency
6. Patients with multiple renal AMLs (2 or more of >3cm, or more than 3 of any size)
7. Patients diagnosed with kidney cancer under the age of 30

Histological type and translocation RCC do not usually indicate an underlying hereditary cancer syndrome.
