

22nd - 24th May 2018  
Helsinki, Finland

## DEVELOPING CAPABILITIES FOR SAR OPERATIONS IN AUSTERE ENVIRONMENTS

**Maritime Search and Rescue**, chaired by **Chris Reynolds**, Director, **Irish Coast Guard** is the must-attend event for coast guards, governments, response agencies, regulatory bodies and ship operators to learn how to optimise their capabilities for operations in austere environments.

Over 25 speakers from 15 nations will share unique strategies, successful case-studies and operational requirements so you can leave with the knowledge to develop your agency's capabilities and save lives.

Increasing vessel traffic, developments in technology and extreme environmental conditions are forcing response units across the world to review and increase their Maritime Search and Rescue capabilities.

The pre-conference focus day will discuss **Airborne Assistance in SAR Operations** before the main **2-day meeting agenda** takes place.

With the event taking place next May, this is the perfect opportunity to secure your presence and confirm your accommodation before the New Year.

Download the **confirmed agenda** and secure your **free end user pass** today.
