

School of Engineering and Technology

Title of Programme: Modular Masters in Aerospace, Automotive, Manufacturing and Mechanical

Programme Code: EIMASTAD

Programme Specification

This programme specification is relevant to students entering:
01 September 2017

Associate Dean of School (Academic Quality Assurance):
Ray Wilkinson

Signature

A programme specification is a collection of key information about a programme of study (or course). It identifies the aims and learning outcomes of the programme, lists the modules that make up each stage (or year) of the programme, and the teaching, learning and assessment methods used by teaching staff. It also describes the structure of the programme, its progression requirements and any programme-specific regulations. This information is therefore useful to potential students to help them choose the right programme of study, to current students on the programme, and to staff teaching and administering the programme.

Summary of amendments to the programme

Date	Section	Amendment
June 17	various	Minor updates. Changes highlighted in red.

Programme Specification

MSc Aerospace Engineering

MSc Automotive Engineering

MSc Mechanical Engineering

MSc Manufacturing Management

MSc Operations and Supply Management

This programme specification (PS) is designed for prospective students, enrolled students, academic staff and potential employers. It provides a concise summary of the main features of the programme and the intended learning outcomes that a typical student might reasonably be expected to achieve and demonstrate if he/she takes full advantage of the learning opportunities that are provided. More detailed information on the teaching, learning and assessment methods, learning outcomes and content for each module can be found in Definitive Module Documents (DMDs) and Module Guides.

Section 1

Awarding Institution/Body	University of Hertfordshire
Teaching Institution	University of Hertfordshire
University/partner campuses	College Lane
Programme accredited by	See page 9
Final Award (Qualification)	MSc
All Final Award titles	Aerospace Engineering Automotive Engineering Mechanical Engineering Manufacturing Management Operations and Supply Chain Management
FHEQ level of award	7
Language of Delivery	English

English languages that have been approved

A. Programme Rationale

This programme consist of a number of “specialist” Masters awards with an expectation that students will have studied a related engineering discipline to a Bachelor’s level or equivalent, as opposed to a “conversion” masters philosophy aimed at students from a non-engineering background. The MSc awards are normally studied over three semesters with the final semester being a 60 credit point individual project. The MSc has two starting points. This has been adopted to meet the demand from international students whose previous studies were conducted with a different academic year to the normal September to September year operated in the UK. The consequence of this is that the modules that make up the MSc curriculum need to be independent of each other as the two intake groups of students will not necessarily take modules in the same order. Students entering in semester B will therefore complete their studies over an 18 month period rather than 12 months. It is also possible for a student to study these awards on a part-time basis over a three year period.

The successful postgraduates of the programme will acquire the knowledge and understanding, intellectual, practical and transferable skills necessary for the analysis and synthesis of problems in engineering and manufacturing through a combination of experimental, simulation, research methods and case studies. They can expect to gain work in a range of disciplines within a variety of industries from specialist technical roles to positions of management responsibility.

On the MSc Aerospace Engineering, the development of skills and advancement of knowledge focus on:

- dynamic structural and aeroelastic analysis of aerospace vehicles, flight dynamics, stability and control and the implications for the design and construction of aerospace vehicles;
- the construction of CFD models and to assess implications of results, the limitations of present techniques and the potential future direction of developments in the CFD and aerodynamics field;
- appreciation of the need for process, product development and quality and reliability issues relevant to the introduction of products in a cost effective and timely manner;
- critical review of the present knowledge base, its applicability, usage and relevance to enhance product and enterprise performance.

On the MSc Automotive Engineering, the development of skills and advancement of knowledge focus on:

- the selection of materials, process and techniques for the structural analysis and the design and construction of automotive components such as body and chassis, in relation to vibration and vehicle dynamics;
- understanding of alternative power train and fuel technologies, their impact on vehicle performance and environment;
- the construction of CAE models and to assess implications of the results, the limitations of present techniques and the potential future direction of developments in the CAE field;
- appreciation of the need for process and product development relevant to the introduction of products in a cost effective and timely manner;
- critical review of the present knowledge base, its applicability, usage and relevance to enhance product and enterprise performance.

On the MSc Mechanical Engineering, the development of skills and advancement of knowledge focus on:

- the selection of materials, process and techniques for the structural analysis, design and construction of engineered components;
- the understanding of the control and dynamics theories used in the design of systems and more specifically their application in a wide variety of engineered systems and subsystems;
- the construction of CAE models and evaluation of results, the limitations of present techniques and the potential future direction of developments in the CAE field;
- appreciation of the need for process, product development and quality and reliability issues relevant to the introduction of products in a cost effective and timely manner;
- critical review of the present knowledge base, its applicability, usage and relevance to enhance product and enterprise performance.

On the MSc Manufacturing Management, the development of skills and advancement of knowledge focus on:

- the broad areas of business, operations management, information systems, product development and quality systems;
- design orientated tasks, including analysis and synthesis, to develop relevant and applicable procedures and processes to resolve technical and ultimately business problems;
- critical review of the present knowledge base, its applicability, usage and relevance to enhance product and enterprise performance.

On the MSc Operations and Supply Chain Management, the development of skills and advancement of knowledge focus on:

- the broad areas of business, operations management, operations research, procurement and supply chain management, financial control, manufacturing information systems, manufacturing strategy; legal aspects of supply chain; and human resources management;
- case studies, including analysis and synthesis, contribution to profitability, understanding of purchasing, procurement and logistics;
- critical review of strategic value, procurement and supply chain management.

B. Educational Aims of the Programme

The programme has been devised in accordance with the University's graduate attributes of programmes of study as set out in [UPR TL03](#).

Additionally this programme aims to:

- provide a quality education at postgraduate level in the disciplines of aerospace, automotive, mechanical, manufacturing management/technology and operations and supply chain management;
- provide an educational opportunity and experience to graduates and/or those with appropriate previous experience which enhances their prospects of professional employment with industry;
- provide a variety of awards of study through which the postgraduate may demonstrate competence, knowledge, skills and understanding, in and of, selected disciplines in the field of engineering, management and technology;
- provide the students with the knowledge and understanding to equip them for a career in technical and engineering management;
- provide and equip the students with theory and the practice of process and technology management, system design and implementation.

C. Intended Learning Outcomes

The programme provides opportunities for students to develop and demonstrate knowledge and understanding, skills and other attributes in the following areas. The programme outcomes are referenced to the QAA benchmark statements for Engineering and the Frameworks for Higher Education Qualifications of UK Degree-Awarding Bodies (2014) and relate to the typical student. Additionally, the SEEC Credit Level Descriptors for Further and Higher Education (2016) have been used as a guiding framework for curriculum design.

Knowledge and Understanding:	Teaching/learning methods & strategies	Assessment
Aerospace Engineering (AM), Automotive Engineering (AUM) and Mechanical Engineering (MECM) A1 AM. The advanced CAE and simulation methods employed by aerospace engineers. A1 AUM. The advanced CAE and simulation methods employed by automotive engineers. A1 MECM. The advanced CAE and simulation methods employed by mechanical engineers. A2 AM. The fundamental sciences appropriate to aerospace engineering. A2 AUM. The fundamental sciences appropriate to automotive engineering. A2 MECM. The fundamental sciences appropriate to mechanical engineering. A3. Appropriate research methods employed in analysis of technical and commercial problems. A4. The product/process definition and systems design process.	Acquisition of knowledge and understanding is through a combination of lectures, seminars, group discussions and assignments. Throughout, the learner is encouraged to undertake independent study both to supplement and consolidate what is being taught/learnt and to broaden their individual knowledge and understanding of the subject	Knowledge and understanding are assessed through a series of case studies, assignments, project reports and unseen examinations.

Manufacturing Management (MMGM) and Operations and Supply Chain Management (OSCM)

- A5. The techniques relevant to the analysis of business strategy and planning.
- A6. The product definition and systems design process.
- A8. Operations management techniques and processes in manufacturing and service sectors.
- A9. Resource management planning and systems implications.
- A10. The analytical techniques employed in management and process control.
- A7 OSCM. Relevant techniques for commercial and professional engineering practice in the context of Operations and Supply Chain Management.
- A7 MMGM Relevant techniques for commercial and professional engineering practice in the context of Manufacturing Management

Intellectual skills:

Teaching/learning methods & strategies

Assessment

Aerospace Engineering, Automotive Engineering and Mechanical Engineering

- B1. Analyse and solve engineering problems using appropriate techniques.
- B2. Design/model/analyse relevant engineering systems/subsystems.
- B3. Critically review and select appropriate research methods to solve engineering and commercial problems.
- B4. Evaluate external influences on the design process.

Intellectual skills are developed throughout the programme by the methods and strategies outlined in section A, above.

Analysis, problem solving and modelling skills are further developed through case studies, class discussion, in-course exercises, assignments and exams.

Throughout, the learner is encouraged to further develop intellectual skills by guided and independent study.

Intellectual skills B1-B6 are assessed through case studies, experiential work, tutorials, assignment and examinations. These are supported by work centred on analysis and synthesis, problem solving, in technical and managerial contexts.

Manufacturing Management and Operations and Supply Chain Management

- B1 MMGM. Analyse and solve Manufacturing Management problems using appropriate techniques.
- B1 OCSM. Analyse and solve Operations and Supply Chain Management problems.
- B2. Design/model/analyse relevant engineering systems/subsystems.
- B3. Critically review and select appropriate research methods to solve engineering and commercial problems.
- B4 MMGM. Evaluate external influences on the design process in the context of Manufacturing Management.
- B4 OCSM. Evaluate external influences on the design process in the context of Operations and Supply Chain Management.
- B5. Identify the influence of resource related issues on operations and business.
- B6. Design appropriate management systems and processes.

Practical skills:

Teaching/learning methods & strategies

Assessment

All awards

- C5. Plan and manage project, taking into account commercial, industrial and resource constraints.

Additionally for:

Aerospace Engineering, Automotive Engineering and Mechanical Engineering

- C1 AM. Apply appropriate experimental, analytical and modelling techniques to a range of aerospace engineering

Practical skills are developed throughout the programme through a series of case studies, experimental and simulation exercises, project reports and viva.

Skills C1 – C4, C6 and C7 are developed through the programme of study and associated written reports and submissions.

C5 is developed throughout the programme of the study, with one-to-one supervision during the individual project.

Practical skills C1-C7 are formerly assessed through assignment work on case studies and the individual project

problems draw conclusions.

- C1 AUM. Apply appropriate experimental, analytical and modelling techniques to a range of automotive engineering problems and draw conclusions.
- C1 MECM. Apply appropriate experimental, analytical and modelling techniques to a range of mechanical engineering problems and draw conclusions.
- C2. Use advanced computer-aided engineering tools.
- C3. Prepare technical documentation.
- C4. Evaluate the design of appropriate systems, components or processes.

Manufacturing Management and Operations and Supply Chain Management

- C1 MMGM. Apply appropriate experimental, analytical and modelling techniques to a range of manufacturing problems and draw conclusions.
- C1 OSCM. Apply appropriate experimental, analytical and modelling techniques to a range of business applications and draw conclusions.
- C6. Appropriate evaluation of the resource constraint implications on management decision making.
- C7. Plan the effective implementation of appropriate management systems and processes.

Transferable skills:	Teaching/learning methods & strategies	Assessment
All awards D1. Communicate information effectively, orally and/or in writing. D2. Manage time and resources effectively. D3. Work effectively individually and/or within a team. D4. Solve problems in a logical and coherent manner. D6. Learn effectively and independently, in preparation for lifelong learning. Additionally for: Aerospace Engineering, Automotive Engineering and Mechanical Engineering D5. Manipulate, sort and present data.	Transferable skills are developed throughout the programme by using group discussions and report writing and require students to manage their own time for achieving targets. Skill D1 is developed through coursework reports, oral presentations, research methods and the project report. Skill D2 is developed through meeting deadlines for scheduled assignments and the individual project. Skills D3, D4 and D5 are developed throughout most modules; through lectures, group work, assessments and the individual project. Skill D6 is encouraged and developed by the nature of the programme of study and the acquisition of transferable skills.	Transferable skills D1-D6 are assessed through assignment work and the project.

D. Programme Structures, Features, Levels, Modules, and Credits

The programme is offered in full-time and part-time modes.

Full-time students may enter the programme for a Semester A start in September when it runs over one calendar year or in January for a Semester B start when it runs over 18 months. Identical modules will be studied on both September and January intakes. Students on the September and January intakes complete their projects in Semester C or B respectively.

In a part-time mode, the programme is normally offered in 3 years with identical modules studied with the full-time students.

Entry is normally at Masters Level 7 with related degree qualifications.

Accreditation of prior learning (APEL/APCL) is available for this programme. Students wishing to claim APL must document their relevant prior learning in detail and must provide full evidence for their prior achievement of the learning outcomes of this programme.

The Programme Learning Outcomes detailed in section C are developed and assessed through the constituent modules. Table 2 (at the end of this document) identifies where each learning outcome is developed and assessed.

Professional and Statutory Regulatory Bodies

Accreditation of the Aerospace, Mechanical and Automotive Engineering awards is in progress with the Institution of Mechanical Engineers and the Royal Aeronautical Society.

Programme Structure

The programme structure and progression information below (Table 1a and 1b) is provided for the award. Any interim awards are identified in Table 1b. The Programme Learning Outcomes detailed above are developed and

assessed through the constituent modules. Table 2 (in section 2) identifies where each learning outcome is assessed.

Table 1a Outline Programme Structure

Mode of study: Full-time/Part-time

A typical study pattern for a 3-year part-time student would be 60 credit points of taught modules in the first year, a further 60 credit points of taught modules in the second year and the project in the final year. The order of the modules is agreed in consultation with the Programme or Deputy Programme tutor with a maximum of 75 credit points within any one academic year.

Entry point: A or B

Note: Semester B entry students study the same modules as semester A entry students, except the MSc individual Project is studied in Semester B of the second year rather than semester C.

The following notations should be read in conjunction with tables below:

AM = Aerospace Engineering
AUM = Automotive Engineering
MECM = Mechanical Engineering
MMGM = Manufacturing Management
OSCM = Operations and Supply Chain Management
c = compulsory module
o = optional module.

Entry Point – Semester A

Module Title	Module Code	Award					Credit Pts.	Language of Delivery	% exam	% ICA	% Practical	Semester.	Year of Study	
		AM	AUM	MECM	MMGM	OSCM							Full Time Mode	Part Time Mode
Aeroelasticity	7AAD0039	c					15	English	60	40	-	A	1	1
CFD Techniques	7ENT1007	c	c	c			15	English	60	40	-	A	1	1

Automotive Electrical Systems	7AAD0056		c				15	English	60	40	-	A	2	2
Human Resource Management	7AAD0062					c	15	English	60	40	-	A	2	1
MSc Individual Project (MSc Projects)	7ENT1072	c	c	c	c	c	60	English	0	100	-	B or BC	2	3

To progress to the project stage, the candidates are expected to have successfully completed a minimum of 90 credits.
The award of a Masters Degree requires 180 credit points passed at level 7, including the MSc Individual Project.

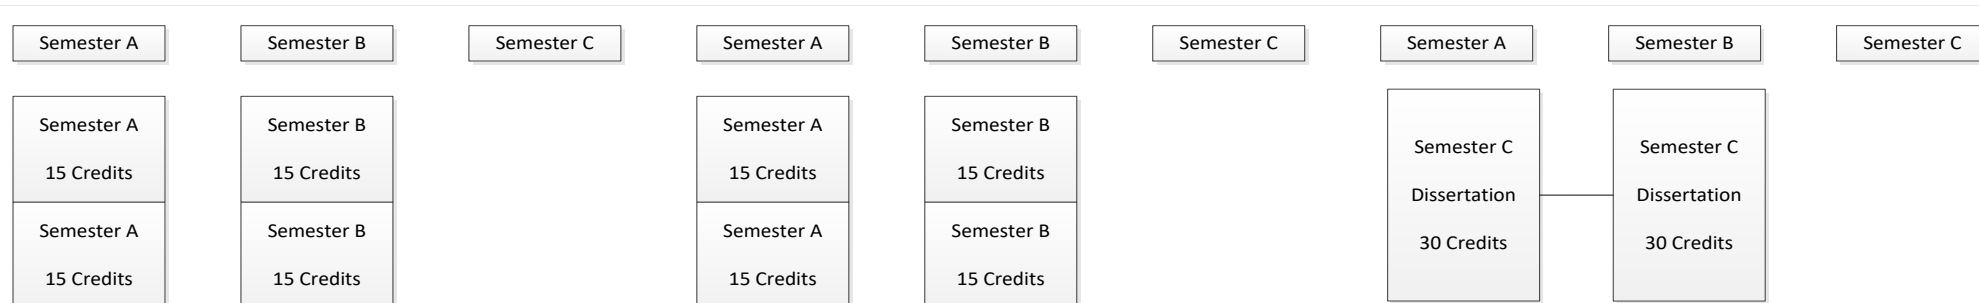

MSc (Semester A Entrant) – Full Time Structure

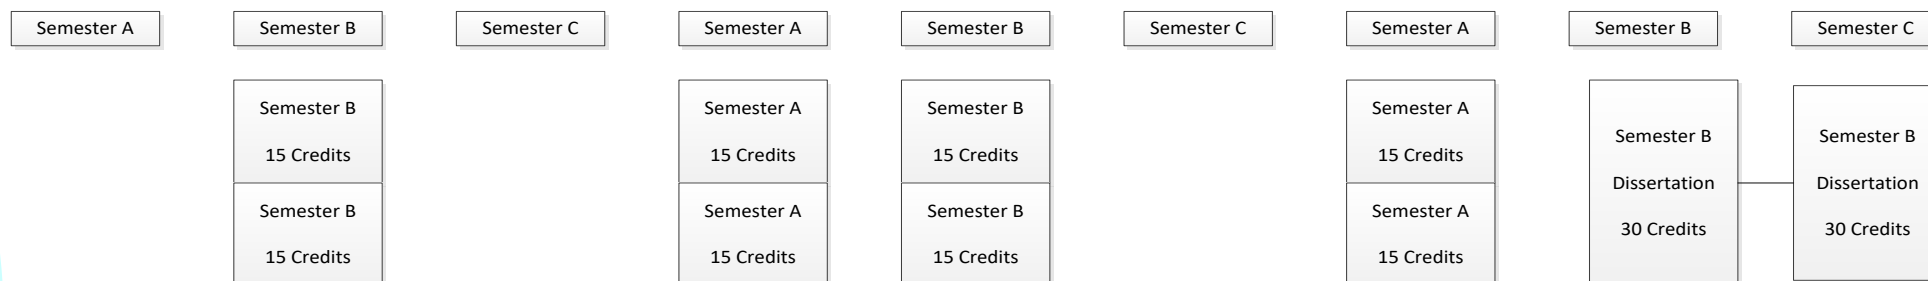

MSc (Semester B Entrant) – Full Time Structure

MSc (Semester A Entrant) Part Time Structure

MSc (Semester B Entrant) Part Time Structure

The award of an MSc degree requires 180 credit points passed at level 7, including the Masters project.

Table 1b Final and interim awards available

The programme provides the following final and interim awards:

Final Award	Award Title	Minimum requirements	Available at end of (normally):	Programme Learning Outcomes developed (see above)
MSc in named award	Aerospace Engineering Automotive Engineering Mechanical Engineering Manufacturing Management Operations and Supply Management	180 credit points including at least 150 at level 7	3 Semesters	All programme learning outcomes (see Table 2)
Interim Award	Award Title	Minimum requirements	Available at end of Level	Programme Learning Outcomes developed (see above)
Postgraduate Diploma in named award	Aerospace Engineering Automotive Engineering Mechanical Engineering Manufacturing Management Operations and Supply Management	120 credit points, including at least 90 at level 7	2, 3 Semesters	Aerospace Engineering, Automotive Engineering and Mechanical Engineering A1, A2, B1, B2, B4, C1, C2, C3, C4, D1, D4, D5 Manufacturing Management and Operations and Supply Chain Management A9, B1, B2, B4, B5, C1, D1, D3, D4
Postgraduate Certificate		60 credit points, including at least 45 at level 7	1-2 Semesters	For untitled awards: See UPR AS11, section 13: http://sitem.herts.ac.uk/secreg/upr/AS11.htm

Masters and Diploma awards can be made "with Distinction" or "with Commendation" where criteria as described in [UPR AS14](#), Section D and the students' handbook are met.

Programme-specific assessment regulations

The programme is compliant with the University's academic regulations (in particular, [UPR AS11](#), [UPR AS12/UPR AS13](#) (*delete as applicable*) and [UPR AS14](#)) with the exception of those listed below, which have been specifically approved by the University:

Other information relevant to the programme

- None

University policies relevant to the Programme

The University undertakes to use all reasonable endeavours to deliver, assess and administer this programme in accordance with this Programme Specification. At the same time it is recognised that it is in the nature of academic developments that changes, for example to the structure, curriculum, and assessment of a programme may be necessary in order to ensure that the programme remains up to date, in response to issues raised as a result of on-going monitoring and evaluation, and/or in order to conform to new regulatory requirements imposed by this institution, by professional or statutory bodies, or by national or governmental bodies.

The programme operates within the guidelines and policies relating to equal opportunities and environmental issues which may be agreed from time to time by the Board of Governors and/or the Academic Board of the University.

Where the programme is offered in collaboration with another institution these policies and guidelines will normally be those of the partner institution.

The programme operates in accordance with the University's Regulations Governing Studies Involving the Use of Human Subjects ([UPR RE01](#)) agreed from time to time by the Academic Board of the University. However, where the programme is offered in collaboration with another institution (for example through a franchise arrangement for all or part of the programme) then specific approval must be obtained from the University for the operation of the programme within ethical guidelines prepared by the partner institution. The partner institution will be responsible for all insurance liability in connection with the observance of ethical guidelines.

E. Management of Programme & Support for student learning

Management

The programme is managed and administered through:

- Dean of School;
- Associate Dean of School (AQA) who has overall responsibility for Quality Assurance;
- Associate Dean of School (L&T) who has overall responsibility for Learning & Teaching;
- the Programme Leader who is responsible for chairing the programme committee and advising students on the programme as a whole;
- the Student Administrator responsible for the administration associated with the programme;
- Deputy Programme Leaders who are responsible for the day to day management;
- an Admissions Tutor, with specific responsibility for selection;
- a programme committee that includes the above plus student representation;
- module leaders who are responsible for individual modules.

Support

Students are supported by:

- an induction week at the beginning of each new academic session;
- an extensive Learning Resources Centre, incorporating a library and computer centre;
- guided student-centred learning through the use of StudyNet;

- a student handbook that is specific to the programme;
- a Programme Leader who can advise on programme issues;
- a Student Administrator and admin assistants in the school office;
- Deputy Programme Leaders who provide personal tutoring support;
- Module teaching teams who provide academic support;
- Computer and technical laboratories facilities and technical support staff;
- a project supervisor;
- student representatives on the programme committee;
- the Mathematics Drop-in Centre;
- the Careers, Employment and Enterprise Service that support students looking for either graduate employment or an industrial placement.
- a substantial Student Centre that provides advice on issues such as finance, University regulations, legal matters etc;
- the Medical Centre;
- the Accommodation Office;
- the International Students Centre who organise an Overseas Student Orientation induction programme;
- printing, photocopying, laminating and document binding facilities;
- Nightline – a confidential student listening and information service in the evening when other services are not available;
- a confidential counselling service;
- University Disability Advisors;
- an Equal Opportunities Officer;
- the Students' Union.

F. Other sources of information

In addition to this Programme Specification, the University publishes guidance to registered students on the programme and its constituent modules:

- A Programme (or Student) Handbook;
- A Definitive Module Document (DMD) for each constituent module;
- A Module Guide for each constituent module.

The [A-Z of the University of Hertfordshire](#) is an introduction to the academic, social, cultural and sporting services and opportunities available at the University of Hertfordshire, and includes the Student Charter and Student Code of Conduct.

As a condition of registration, all students of the University of Hertfordshire are required to comply with the University's rules, regulations and procedures. These are published in a series of documents called 'University Policies and Regulations' (UPRs). The University requires that all students consult these documents which are available on-line, on the UPR web site, at: <http://www.herts.ac.uk/secreg/upr/>. In particular, [UPR SA07](#) 'Regulations and Advice for Students' Particular Attention - Index' provides information on the UPRs that contain the academic regulations of particular relevance for undergraduate and taught postgraduate students.

The UK Quality Assurance Agency for Higher Education (QAA) has confirmed the quality and standards of provision at the University of Hertfordshire. A key part of QAA's role is to review and report on how universities maintain their academic standards and quality, to inform students and the wider public. The team of QAA reviewers visited the University of Hertfordshire in 2015/16 and judged that its academic standards, the quality and enhancement of its students' learning experience, and the quality of information about this learning experience all meet UK expectations. In other words, the University meets national requirements for standards and quality. The QAA's report can be accessed at: <http://www.qaa.ac.uk/reviews-and-reports/provider?UKPRN=10007147#.V-KHajXy0nE>

G. Entry requirements

The normal entry requirements for the programme are:

- typically a minimum of 2:ii honours degree in Aerospace, Automotive, Mechanical, or Manufacturing, (with a relevant analytical content) based discipline; **or**

- ii. any other contiguous discipline the subject content of which does not overlap with that of the programme to any substantial extent; **or**
- iii. a qualification from any other recognised International academic institution which is of comparable academic standard to those identified above; **or**
- iv. exceptionally, a number of applicants with other relevant professional qualifications who have the necessary academic achievements and experience will be considered under APCL.

English Language Requirements

Addition to the requirements stated above, students entering the programme and whose first language is not English will be required to demonstrate a proficiency in English to TOEFL 550/IELTS 6.0 or an equivalent recognised qualification. For IELTS, this should include a minimum score of 5.5 in each band. Students without IELTS of 6.0 or equivalent, depending on the Country of Origin, would normally be expected to complete a suitable programme of study prior to the commencement of their MSc programme, such as Pre-Sessional English Classes, Foundation Certificate in English for Academic Studies, International Pre-Masters Programme (IPM), or any other suitable programme deemed appropriate by the University.

Prospective students may be required to attend an interview typically in order to review their subject background or English proficiency. In certain cases, a student may be advised or required to undertake preliminary studies or bridging course before starting the course.

The programme is subject to the University's Principles, Policies and Regulations for the Admission of Students to Undergraduate and Taught Postgraduate Programmes (in [UPR SA03](#)), along with associated procedures. These will take account of University policy and guidelines for assessing accredited prior certificated learning (APCL) and accredited prior experiential learning (APEL).

If you would like this information in an alternative format please contact:
School Administration Manager

If you wish to receive a copy of the latest Programme Annual Monitoring and Evaluation Report (AMER) and/or the External Examiner's Report for the programme, please email a request to aqo@herts.ac.uk

Table 2: Development of Intended Programme Learning Outcomes in the Constituent Modules

This map identifies where the programme learning outcomes are assessed in the constituent modules. It provides (i) an aid to academic staff in understanding how individual modules contribute to the programme aims (ii) a checklist for quality control purposes and (iii) a means to help students monitor their own learning, personal and professional development as the programme progresses.

MSc Aerospace Engineering

			Programme Learning Outcomes (as identified in section 1 and below)																		
			Knowledge & Understanding				Intellectual Skills				Practical Skills					Transferable Skills					
Module Title	Module Code	A1am	A2am	A3	A4	B1	B2	B3	B4	C1am	C2	C3	C4	C5	D1	D2	D3	D4	D5	D6

	CFD Analysis for Aerospace Applications	7ENT1006	X	X		X	X	X			X	X	X	X		X			X	X	
	MSc Individual Project	7ENT1072		X	X		X	X	X	X	X		X	X	X	X	X	X	X	X	X
	Operations Management	7ENT1060				X	X	X		X			X	X	X	X		X	X		
	Control of Engineering Systems	7ENT1074	X	X			X	X			X	X	X	X					X	X	
	Operations Research	7ENT1070	X	X		X	X	X	X	X	X	X	X	X		X		X	X	X	
	FEA and Applications	7ENT1059			X	X	X	X		X				X		X		X	X		

Key to Programme Learning Outcomes

Knowledge and Understanding

A1am. The advanced CAE and simulation methods employed by aerospace engineers.

A2am. The fundamental sciences appropriate to aerospace engineering.

A3. Appropriate research methods employed in analysis of technical and commercial problems.

A4. The product/process definition and systems design process.

Intellectual Skills

B1. Analyse and solve engineering problems using appropriate techniques.

B2. Design/model/analyse relevant engineering systems/subsystems.

B3. Critically review and select appropriate research methods to solve engineering and commercial problems.

B4. Evaluate external influences on the design process.

Practical Skills

C1am. Apply appropriate experimental, analytical and modelling techniques to a range of aerospace engineering problems and draw conclusions.

C2. Use advanced computer-aided engineering tools.

C3. Prepare technical documentation.

C4. Evaluate the design of appropriate systems, components or processes.

C5. Plan and manage a project, taking into account commercial, industrial and resource constraints.

Transferable Skills

D1. Communicate information effectively, orally and/or in writing.

D2. Manage time and resources effectively.

D3. Work effectively individually and/or within a team.

D4. Solve problems in a logical and coherent manner.

D5. Learn effectively and independently, in preparation for lifelong learning.

D6. Manipulate, sort and present data.

MSc Automotive Engineering

		Programme Learning Outcomes (as identified in section 1 and below)																		
		Knowledge & Understanding				Intellectual Skills				Practical Skills					Transferable Skills					
Module Title	Module Code	A1aum	A2aum	A3	A4	B1	B2	B3	B4	C1aum	C2	C3	C4	C5	D1	D2	D3	D4	D5	D6
Integrated Product Engineering	7ENT1064			X	X	X	X		X				X	X	X		X	X		
CFD Techniques	7ENT1007	X	X			X	X			X	X	X	X		X			X	X	
FEA and Applications	7ENT1059	X	X		X	X	X	X	X	X	X	X	X		X			X	X	
Operations Research	7ENT1070	X	X		X	X	X	X	X	X	X	X	X		X		X	X	X	
Automotive Dynamics & Safety	7AAD0054	X	X			X	X		X	X	X	X	X		X			X	X	
MSc Individual Project	7ENT1072		X	X		X	X	X	X	X		X	X	X	X	X	X	X	X	X
Advanced Engines & Power Systems	7ENT1066		X		X	X	X		X	X			X		X			X	X	
Automotive Electrical Systems	7AAD0056		X		X	X	X		X	X			X		X			X	X	
Automotive Materials & Manufacture	7ENT1063		X			X	X		X			X	X		X			X		

Key to Programme Learning Outcomes

Knowledge and Understanding

A1aum. The advanced CAE and simulation methods employed by automotive engineers.

A2aum. The fundamental sciences appropriate to automotive engineering.

A3. Appropriate research methods employed in analysis of technical and commercial problems.

A4. The product/process definition and systems design process.

Intellectual Skills

B1. Analyse and solve engineering problems using appropriate techniques.

B2. Design/model/analyse relevant engineering systems/subsystems.

B3. Critically review and select appropriate research methods to solve engineering and commercial problems.

B4. Evaluate external influences on the design process.

Practical Skills

C1aum. Apply appropriate experimental, analytical and modelling techniques to a range of automotive engineering problems and draw conclusions.

C2. Use advanced computer-aided engineering tools.

C3. Prepare technical documentation.

C4. Evaluate the design of appropriate systems, components or processes.

C5. Plan and manage a project, taking into account commercial, industrial and resource constraints.

Transferable Skills

D1. Communicate information effectively, orally and/or in writing.

D2. Manage time and resources effectively.

D3. Work effectively individually and/or within a team.

D4. Solve problems in a logical and coherent manner.

D5. Manipulate, sort and present data.

D6. Learn effectively and independently, in preparation for lifelong learning.

MSc Mechanical Engineering

		Programme Learning Outcomes (as identified in section 1 and below)																		
		Knowledge & Understanding				Intellectual Skills				Practical Skills					Transferable Skills					
Module Title	Module Code	A1mecm	A2mecm	A3	A4	B1	B2	B3	B4	C1mecm	C2	C3	C4	C5	D1	D2	D3	D4	D5	D6
Control of Engineering Systems	7ENT1074	X	X			X	X			X	X	X	X					X	X	
Dynamics and Performance of Mechanical Systems	7AAD0068	X	X			X	X			X	X	X	X					X	X	
FEA and Applications	7ENT1059	X	X		X	X	X	X	X	X	X	X	X		X			X	X

	Quality, Reliability & Maintenance	7ENT1068		X				X	X	X		X		X	X				X			X	

Key to Programme Learning Outcomes

Knowledge and Understanding

A5. The techniques relevant to the analysis of business strategy and planning.

A6. The product definition and systems design process.

A7mmgm. Relevant techniques for commercial and professional engineering practice in the context of Manufacturing Management.

A8. Operations management techniques and processes in manufacturing and service sectors.

A9. Resource management planning and systems implications.

A10. The analytical techniques employed in management and process control.

Intellectual Skills

B1mmgm. Analyse and solve Manufacturing Management problems using appropriate techniques.

B2. Design/model/analyse relevant engineering systems/subsystems.

B3. Critically review and select appropriate research methods to solve engineering and commercial problems.

B4mmgm. Evaluate external influences on the design process in the context of Manufacturing Management.

B5. Identify the influence of resource related issues on operations and business.

B6. Design appropriate management systems and processes.

Practical Skills

C1mmgm. Apply appropriate experimental, analytical and modelling techniques to a range of manufacturing problems and draw conclusions.

C5. Plan and manage a project, taking into account commercial, industrial and resource constraints.

C6. Appropriate evaluation of the resource constraint implications on management decision making.

C7. Plan the effective implementation of appropriate management systems and processes.

Transferable Skills

D1. Communicate information effectively, orally and/or in writing.

D2. Manage time and resources effectively.

D3. Work effectively individually and/or within a team.

D4. Solve problems in a logical and coherent manner.

D6. Learn effectively and independently, in preparation for lifelong learning.

Section 2

Programme management

Relevant QAA subject benchmarking statements

Type of programme

Date of validation/last periodic review

Date of production/ last revision of PS

Relevant to level/cohort

Administrative School

Engineering

Taught postgraduate

October 17

November 2016

September 2017 & January 2018

School of Engineering and Technology

Table 3 Course structure

Course details					
Course code		Course description			JACS
EIMASTADAE		Modular Masters in Aerospace, Automotive, Manufacturing and Mechanical			H400
Course Instances					
Instances code	Intake	Stream	Instances Year	Location:	Mode of study
AM1F-1	A	Aerospace Engineering	1	Hatfield	Full-time
AM1F-2	A	Aerospace Engineering	1	Hatfield	Full-time
AMP1P	A	Aerospace Engineering	1	Hatfield	Part-time
AMP2P	A	Aerospace Engineering	2	Hatfield	Part-time
AMP3P	A	Aerospace Engineering	3	Hatfield	Part-time
AMB1F-1	B	Aerospace Engineering	1	Hatfield	Full-time
AMB1F-2	B	Aerospace Engineering	1	Hatfield	Full-time

Course details					
Course code		Course description			JACS
EIMASTADAU		Modular Masters in Aerospace, Automotive, Manufacturing and Mechanical			H330
Course Instances					
Instances code	Intake	Stream	Instances Year	Location:	Mode of study
AUM1F-1	A	Automotive Engineering	1	Hatfield	Full-time
AUM1F-2	A	Automotive Engineering	1	Hatfield	Full-time
AUMP1P	A	Automotive Engineering	1	Hatfield	Part-time
AUMP2P	A	Automotive Engineering	2	Hatfield	Part-time
AUMP3P	A	Automotive Engineering	3	Hatfield	Part-time
AUMB1F-1	B	Automotive Engineering	1	Hatfield	Full-time
AUMB1F-2	B	Automotive Engineering	1	Hatfield	Full-time
AUMB1P-1	B	Automotive Engineering	1	Hatfield	Part-time
AUMB1P-2	B	Automotive Engineering	2	Hatfield	Part-time
AUMB3P-3	B	Automotive Engineering	3	Hatfield	Part-time
