

Senior Software Engineer (Java)

About Aetopia

Aetopia are a vibrant and expanding software company based in South Belfast. We specialise in the development of leading-edge Digital Asset Management solutions (DAM) and secure media repositories for a wide and increasingly growing client base currently located in NI, GB, ROI and the rest of Europe. Customers use our software platform to aggregate, store and share all types of digital assets, especially images, video and audio.

Our Culture

We are small, locally owned, informal, relaxed and definitely not corporate in our outlook. We do whatever it takes to make our customers happy and always go the extra mile. We value excellence and believe that small, highly-performing teams are the key to company success.

The Role

Based on Belfast's Lisburn Road, this is an exciting opportunity for a senior software engineer to quickly use and further improve their skills in a mentored environment, and by participating in the development of innovative DAM solutions on a modern cloud framework. At Aetopia, we use a diverse technical stack which includes **Java Spring, Bootstrap, Docker, Elasticsearch, React.js, Javascript** and **MySQL**, all deployed in the AWS cloud. We're open to new ideas and fresh thinking too - as a valued member of our team you will be influential in defining the future software tools we use.

The successful candidate will be a valued member of the team involved with every part of the software development lifecycle, including roadmap feature development, bug fixing and dev-ops, as well as engaging with customers to tailor their solutions. This is an ideal opportunity for a developer with proven technical and communication skills and a great track record to join an existing experienced and high-performing software team.

Benefits

- Highly competitive salary, reviewed annually
- Access to training opportunities
- Flexible working arrangements
- 6% Employer contribution pension

Main Responsibilities

- Develop, test and implement roadmap software features
- Assist with the management and resolution of customer support issues
- Manage the deployment of software into the Amazon cloud, including ongoing maintenance
- Customise the solution to project requirements as required
- Share your knowledge with the team by contributing to the company Wiki
- Mentor junior members of staff and help support their professional development.

Essential Criteria

- Third level IT-related degree
- Strong Java coding skills, evidenced by 5+ years Java development experience
- Significant experience in at least one of the following: Javascript, Docker, AWS, Spring, React
- A team player who enjoys working with others to solve complex problems and share knowledge
- Good communication and interpersonal skills
- Appreciation of database design principles
- Eagerness to learn new technologies and business domain knowledge
