

# LED Ultrasonic Diffusers

## LED Ultrasonic Diffusers

## How do they work?

Ultrasonic diffusers are used to fragrance your home with essential oils.

Inside the decorative casing is a reservoir to which you add water and a few drops of your selected essential oil.

A small ceramic disc within the unit vibrates and breaks the essential oil into tiny particles which are dispersed into the room within the cold water vapour.

## How do I use my diffuser?

- While the unit is unplugged, remove the decorative outer casing and inner lid.
- Pour cold tap water into the reservoir, never above the 'MAX' line.
- Add a few drops of essential oil.
- Reassemble the unit and plug into the mains.
- Each unit has a variety of settings, some can disperse intermittently, some for a set time, and some have colour changing functionality.
- All units will switch off automatically when the reservoir is empty.

## Flame Effect

## How do I care for my diffuser?

- Refresh the water regularly.
- Clean the reservoir with a soft damp cloth.
- Gently clean around the ceramic disc with a cotton bud.
- Ensure all pieces are assembled securely before use.
- Never fill over the 'MAX' line.
- Only use cold tap water.
- Use good quality essential oils.
