

Electric Wax Melters

How do they work?

Electric wax melters fragrance your home by warming wax melts or tarts until they fully melt to liquid.

The heat is generated using either a halogen or an E14 bulb.

Aroma Accessories Electric Melters are available in a huge range of designs, including melters with touch functionality and varied heat and light settings. They are fitted with a UK 3 prong plug.

Glass Leaf

How do I use my melter?

- Place the unit on a level, flat, heat resistant surface away from draughts, other heat sources and flammable objects.
- Ensure the dish is clean and dry.
- Add a piece of wax to the dish, ensuring that the melted volume of the wax will fit comfortably in the dish.
- If using a touch melter, cycle through the settings by gently touching the base of the unit, do not turn the unit on/off by the mains switch.
- Enjoy your fragrance as the wax melts, the wax may last longer than one use.

Ribbed Lustre

How do I care for my melter?

- Use only good quality wax melts.
- To remove the wax: from cold, allow the unit to warm slightly for a couple of minutes, once it's a little soft, while wearing protective gloves, apply gentle pressure to one side of the wax dish and it will slide out.
- Never use metal objects to scrape the dish.
- If the wax runs out, switch off the appliance - don't let it burn dry.
- Treat your melter with caution as it will get hot when in use.
- Do not leave your melter unattended when in use.
- Please keep out of reach of children and pets.
- When changing the bulb wear protective gloves. For units with narrow openings use pliers to gently grip the bulb.

Electric Wax Melters

Wall Plug-In

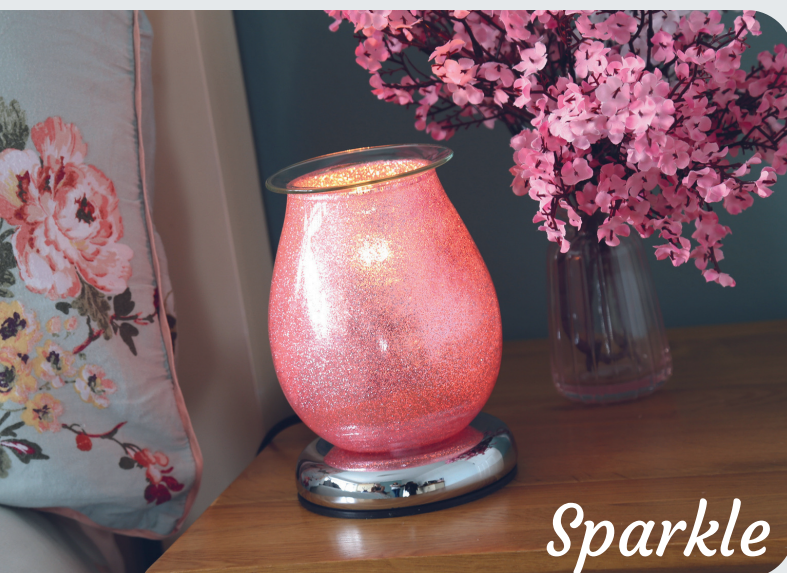

Wall Plug-In Electric Melters

- Smaller units that fit directly into a wall socket.
- They work with an E14 15w bulb and melt the wax in the same way as a larger melter.
- The melter should be turned on/off by the flick switch on the unit.
- Each plug-in melter comes with a spare dish and bulb.
- The melters come in a colour, picture box.
- Keep out of reach of children and pets.

Touch Technology Bases

- Many Aromatize Wax Melters feature "Touch Technology".
- This allows users to cycle through three stages of heat and light to select the best level of fragrance throw for their needs.
- Simply touch the base of the unit allowing a second per stage, to avoid blowing the bulb.
- The melters come in a colour, picture box.
- A spare bulb is provided in the box.

Touch Melters

Sparkle

Something for Every Home
