PROJECT INFO

Fencing Type: AMX-P24

Installation: Attached to existing

Longevity: Permanent

Species: California Tiger
Salamanders

Client: Tim Lewis Communities

Location: California, USA

SUMMARY

In order to prevent California Tiger Salamanders (*Ambystoma californiense*) from entering the draining ponds on a new housing development we designed a long-lasting, low-impact and attractive fencing solution. It was an environmental permit condition to mitigate the dangers this artificial water system could pose to the species of special concern. With the aid of the pragmatic developer we were able to implement a safe and sustainable fencing solution. The fence's high durability will keep annual maintenance costs down and provide a much more effective long term barrier when compared to commonly used mesh and mixed textile materials.

Challenges

- Public interest
- Retrofitted
- Short install window

Actions

- Durable materials
- Installation supervision
- Unique design

Outcomes

- Visually appealing
- Low maintenance
- Quick installation
