PROJECT INFO

Fencing Type: Custom

Installation: Various

Longevity: Permanent

Species: Multiple

Client: Private Landowner

Location: California, USA

SUMMARY

An organic salad leaf grower in California wanted to prevent amphibians from entering the growing areas on their farm through the reservoir and irrigation systems. Alongside their contractor we designed solutions to attach to existing chainlink fencing as well as free standing options. We incorporated an alternative top lip design to deter key tree frog species along with manufacturing bespoke material to attach seamlessly to the existing chainlink fence that included an above ground anti-burrow lip. Our innovative solution inhibits animals' ability to see and sense what lies beyond a boundary and deters them from entering areas where they are not wanted.

Challenges

- Low impact
- Multiple species
- Sensitive areas

Actions

- Unique design
- Installation support
- Custom manufacture

Outcomes

- Sensory barrier
- Low maintenance
- Longevity
