# PROTECTION SLEEVE

- Large ID
- Seal bore protection
- Simple installation and retrieval
- Specialised lifting clamps, deck stands and C-plates available to ensure safe handling

Oilenco offer a range of Protection Sleeves from the standard no-go or snap collet to the more advanced lock-in type mechanisms.

The downhole safety valve protection sleeve has been designed to provide a temporary means of holding open the flapper, whilst also protecting the seal bores from wire damage.

The Set Indicator Prong can be used to confirm the sleeve is securely locked into the nipple profile.
