HIGH DEVIATION JAR

- Enhanced jar impact
- Highly debris tolerant
- 30" stroke

- Uses linear recirculating ball bearings
- Significant impact forces at deviation greater than 80°

The Oilenco High Deviation Jar has been designed to provide enhanced jarring action in highly deviated wells.

The tool offers both upward and downward jar action using linear type recirculating ball bearings allow the jar rod to move freely.

This tool can be used in conjunction with the Oilenco Freeroller to further enhance the performance of the jar in the most demanding well operations.
