

Case Study

Drum Lewis

Working alongside **Mike Greaves**, we helped him add our uniquely designed **FLEXTRON** photovoltaic panels to his rural home in **Drum Lewis, Scotland**.

Benefits of using BIPVco:

Better Shade Tolerance

Our thin film PV panels react proportionally to the area that's covered in shade, unlike a silicon module.

High Quality Build

With a promise of 25 years total lifetime warranty, our PV panels are built to last.

Good Looking

Our thin-film PV panels are the best looking in the market.

Testimonials

Mike Greaves

“ The aesthetics are brilliant. The installation proved no hassle with the contractors & now from the occasional monitoring I believe the output has been 90-95% of the annualised target level.

So far I've certainly seen readings on the inverter of 2100 watts, which meets my 2.4kwp installation. ”
