

Standard Beca-Bin

IN USE

Empty liquid waste down centre funnel and drop cups into outer tubes.

EMPTYING

1. Lift inner unit to a position just clear of the base bin (see figure 1).
2. Keeping the inner unit over the base bin, tilt to one side (see figure 2). Return to upright position and allow any liquid to drain into base bin.
3. Now hold inner unit over plastic bag or bulk receptacle.
4. To release cups operate the cup release lever (see figure 3)
5. Empty liquid waste from base bin.

NB. Beca-Bin is designed so that if used properly, excess waste liquid is kept separate from the used cups. This facilitates the disposal of each type of waste and allows the cups to be saved for recycling if desired. The use of bin liners is neither needed nor recommended.
