FEATURES

- BMW standard chassis trolley jack rubber pad
- Designed to avert damage to the sills and underside of a BMW when using a trolley jack
- Made from durable and robust rubber
- The rectangular locating rubber enables the pad to be secured within the unique BMW jacking port
- For use with a saddle diameter of over 70mm

DESCRIPTION

BMW trolley jack rubber pad, designed to avert damage to the underside of a BMW when using a trolley jack, thus assisting in the prevention of rust on the underside of the vehicle's chassis. Made from durable and robust rubber. The rectangular locating rubber enables the pad to be secured within the unique BMW jacking port. For use with standard chassis trolley jacks with a saddle diameter of over 70mm.
