CURING
SYSTEM

Fast Curing System

Spot on.

The fastest and most
powerful UV curing solution

The Colad Fast Curing System

The process of UV curing (Ultraviolet Curing) is a photochemical process during which the operator uses ultraviolet light from a specially designed tool to instantly dry UV curing products (such as coatings, primers and adhesives).

The Colad Fast Curing System enables you to work faster and more efficiently while significantly reducing curing time between process steps. UV products can be dried fast and easily with the Colad Fast Curing System UV Curing Light. Curing times depend on layer thickness and exposure distance. UV light is able to cure layers with a thickness of up to 1 mm.

The most powerful UV Curing Lamp

3 key products for Smart and Spot Repairs

UV Curing Light

Art.no. 9000

Per piece in a protective case

UV Putty Coarse

Art.no. 915020

190 g tube
For filling small cracks, dents and stone chips

UV Putty Fine

Art.no. 915011

220 g tube
For filling even the slightest micro-holes

18 High intensity UV LEDs

Constant UV intensity

Smart cooling

Lightweight design and easy to operate

Cord wired, so always at your service

Easy dosing from the tube

Designed to fill microholes, cracks, dents and stone chips

Ready to use, no need to add a hardener

Styrene free

Possible to apply multiple thin layers right after each other

Extremely fast drying UV Putty

Accelerate your curing time

The Colad Fast Curing System includes a complete range of products to prepare minor and major damage.

Complement with:

Pump Spray Bottle
Art.no. 9705

Non Woven Degreasing Wipes
Art.no. B12686589

Control Powder
Art.no. 8035

Plastic spreaders
Art.no. 910x

Nitrile Gloves Grey
Art.no. 53820x

UV Safety Goggles
Art.no. 5087

Snap Lid System® UV
Art.no. 9370xxxSLSUV

Snap Lid System® 88 ml SMART repair
Art.no. 931001x0SLS
