

ConnectShare

Connect by Codelocks delivers advanced locking solutions designed to meet the demands of modern working environments, while providing the high-quality customer experience today's users expect. ConnectShare smart locks provide simple and convenient access control via the Codelocks Connect App. The locks support up to 350 flexible User Codes and Smart Cards as well as flexible Smartphone Users, NetCode® Technology, Code Free and Do Not Disturb privacy features.

Codelocks Connect App

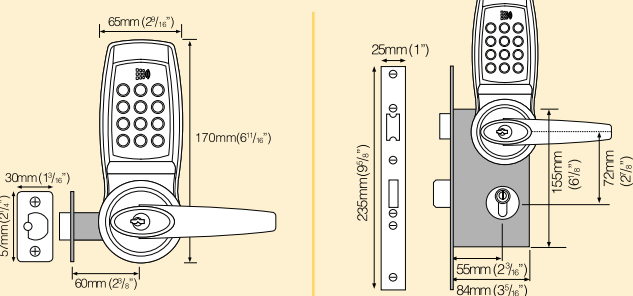

The Codelocks Connect App provides an intuitive management experience for Codelocks locking solutions. The app allows users to unlock their locks, and administrators to set and change lock settings as well as manage lock users.

When managed via the app User Codes support additional features and permissions:

- ✓ **Set Code Free** - allow the user to enable Code Free mode via the keypad for easy unrestricted access when required.
- ✓ **Set GuestCode** - allow the user to set a GuestCode via the keypad for the duration of their stay.
- ✓ **Set Do Not Disturb (DND) mode** - allow the user to enable DND via the keypad allowing the user to control their privacy.
- ✓ **NetCode®** - set time sensitive codes in seconds via the Codelocks Connect App.
- ✓ **Auto Set DND** - automatically set the lock into DND mode after access.
- ✓ **Override DND** - allow the user credential to override DND mode if set.
- ✓ **Lockdown** - allow the user to enable Lockdown via the keypad.

Finishes:
Brushed Steel

CL550OCC

Heavy Duty – Latch, Lock & Panic access options available

Finishes:
Brushed Steel
Solid Black

Smartphone Clients

Invite new and existing Codelocks Connect App users to unlock your lock but only within your set parameters. Set the active period with a start date and end date ensuring you are in control.

Code Free

Code Free allows for easy unrestricted access. When enabled, no access code required. When used in combination with User Code permissions, this provides a flexible approach to access space in rental and temporary applications.

Do Not Disturb

A useful privacy function preventing another user from entering a room or space when it is already occupied. When the DND Function is enabled the lock LEDs will flash red every 5 seconds to indicate that the lock is in this mode. Only the user who enabled Do Not Disturb and any authorised users can override or cancel Do Not Disturb. The DND enabler can exit and re-enter without having to re-enable DND. This privacy function is ideal for private spaces and changing room scenarios.

Dual Authorisation

For enhanced protection, enable Dual Authorisation. The lock will require any two valid credentials to be presented before access is granted.

GuestCode

Allow guests to set their own user code for the duration of their stay. The guest enters the set GuestCode prefix and then sets their own code.

Multi-Admin

Enable shared control of lock management. Invite app users to manage individual locks and assign permissions, allowing designated administrators to update lock settings and manage client details.

ConnectShare locks are ideal for shared, rental spaces.
