Idea

With the Idea key-cutting machine Silca inaugurates a new style of duplication for code cutting and copying bit and double bit, pipe and pump, and 'English' keys (with shoulder). This electronic key-cutting machine guarantees precision within hundreds of millimeters with both methods of cutting (code and copying). The main innovative characteristics of the machine, which is designed to meet the needs of professional key-cutters, are its accuracy and ease of use. Idea works as a stand alone or connected to a personal computer.

Idea

Idea is the key-cutting machine for bit and double bit, pipe and pump keys.

 Idea is designed and produced entirely to CE mark European standards.

Technical Data

Motor: Single phase with heat probe

Power supply: Single phase 230V/50Hz

Clamp: 360° rotating universal clamp, controlled by magnetic positioning sensor

Movements: On 3 axes (+/- 0.05 mm - 0.002"), controlled by pre-loaded ball screws activated by step motors on rectified roller guides

Cutter: 1.25 mm (0.05") carbide cutter. Other types of cutters available on request.

Cutter speed: 800 rpm

Axes runs: X=37 mm - 1.46", Y=40 mm - 1.57" (B=360° rotation)

Dimensions:
Width: 400 mm - 15.74", Depth: 520 mm - 20.47"
Height: 450 mm - 17.72" (with raised shield:
720 mm - 28.35")

Weight: 46,4 Kg

Order Code

Aldridge Idea code: L13839

Automatic operation

Idea carries out a wide range of operations automatically, ensuring precision and speed for the cutting cycle of any type of key.

Electrical contact

An innovative gauging system by electrical contact makes it possible to identify the correct dimensions of the key automatically with absolute precision.

Axes gauging

Carried out automatically by the key-cutting machine.

Optic reader

Absolute precision in reading the key, due to the patented laser optic reader. The optic reader is gauged automatically by the machine.

Carriage advancement speed

The possibility to select a suitable carriage advancement speed makes for maximum precision in cutting keys in any type of material.

Axes gauging is carried automatically by the key-cutting machine

Profile radius

The key-cutting machine automatically creates the radius progressively on the bit profile. This innovative function gives optimized cutting cycle times without the operator having to do anything.

Key grip

Used to position the original key rapidly and accurately, the key grip is designed to hold a wide range of keys with stems of different diameters.

Swarf box

The swarf collection box helps to keep the work area clean. It is located close to the cutter and slants so that the swarf collects and is removed from the work area.

Clamp

Universal clamp, 360° rotation, used for cutting both sides of the key bit. It is designed to house a tailstock with which to cut bit and double bit keys, male and female, without the need for additional optional devices.

IDEA STAND ALONE AND IDEA WITH PERSONAL COMPUTER

STAND ALONE

As a stand alone IDEA cuts keys by code or copying through simple operating sequences entered on the convenient keypad housed in a central position where it is easily accessed and used. The machine memory holds over 300 different cutting and decoding systems, and memorize over 1000 cutting systems. Gauging, configuration and diagnostics are carried out rapidly and controlled by

the numerous automatic devices on the machine. The programs and database on the machine can be updated easily and quickly through a PC serial port.

WITH P.C.

Using the IDEA key-cutting machine with a personal computer allows you to fully exploit its potential. Besides the functions described above for the stand-alone, the Silca Key Program makes it possible to:

- process and manage your

list of customers

- plan work queues
 - search for references by direct or indirect codes
 - search by partial cuts (* only for shoulder stop keys)
 - create customized key-cutting systems.
- For each system selected, Silca Key Program provides the technical data and all information relating to the selected key and the cutting system required. SW Program available in 5 languages.

In compliance with current regulations relating to industrial property, we hereby state that the trade marks or trade names are registered only for the purposes of information so that any lack of identification for professional key-cutters who use Silca products.
