(M6 WASHER - SMALL)

Wear the appropriate protective equipment (safety glasses & gloves) while fitting this product.

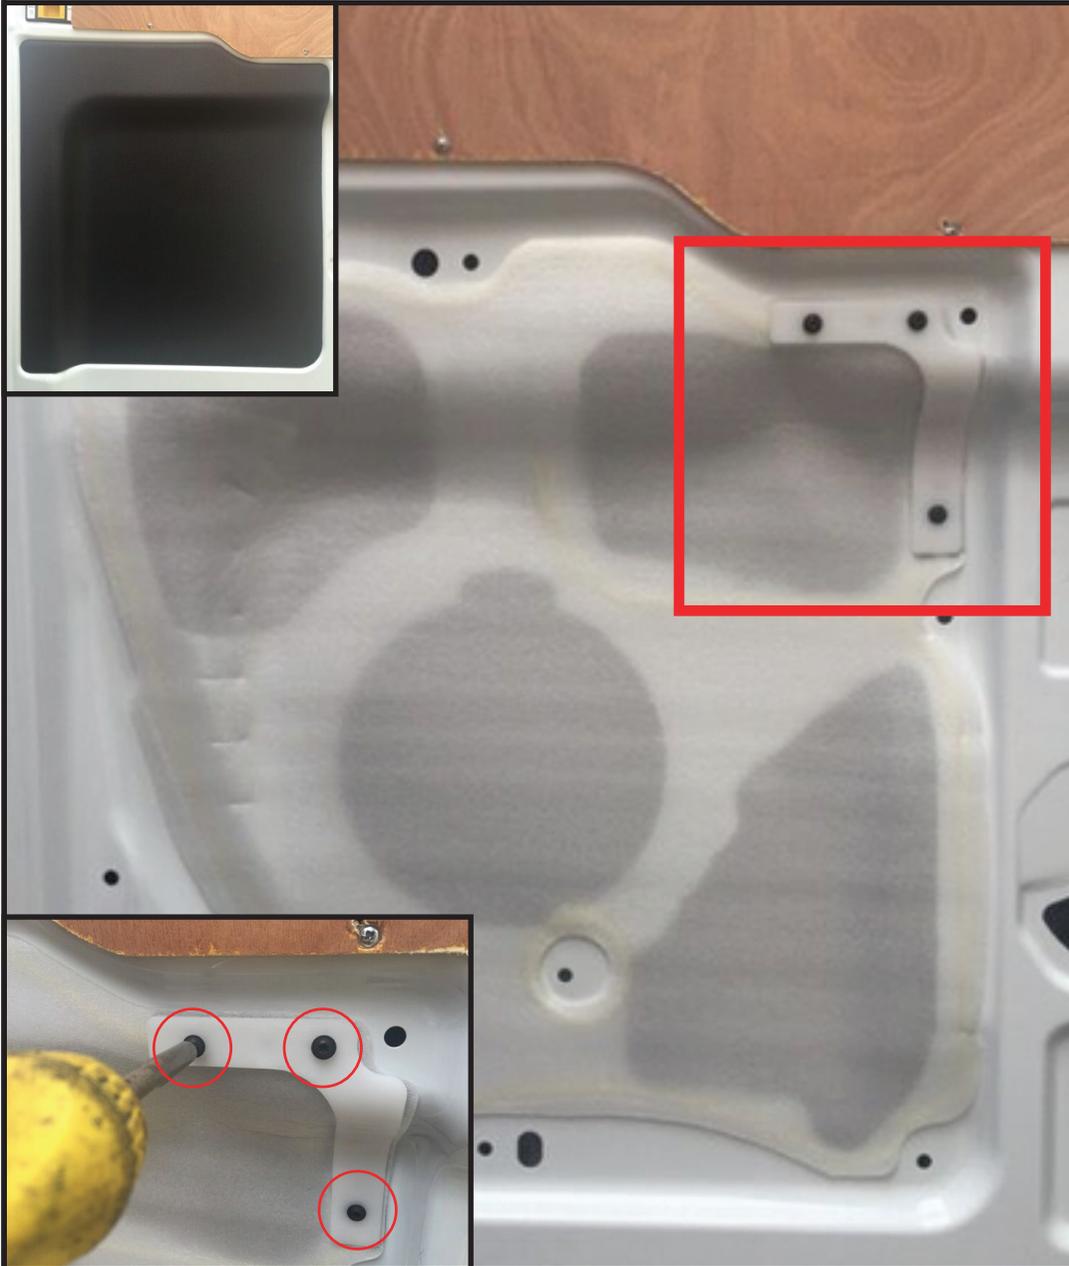

Dispose of packaging materials responsibly - Do not dispose until you have checked all parts and fixings are present.

# FITTED IMAGE

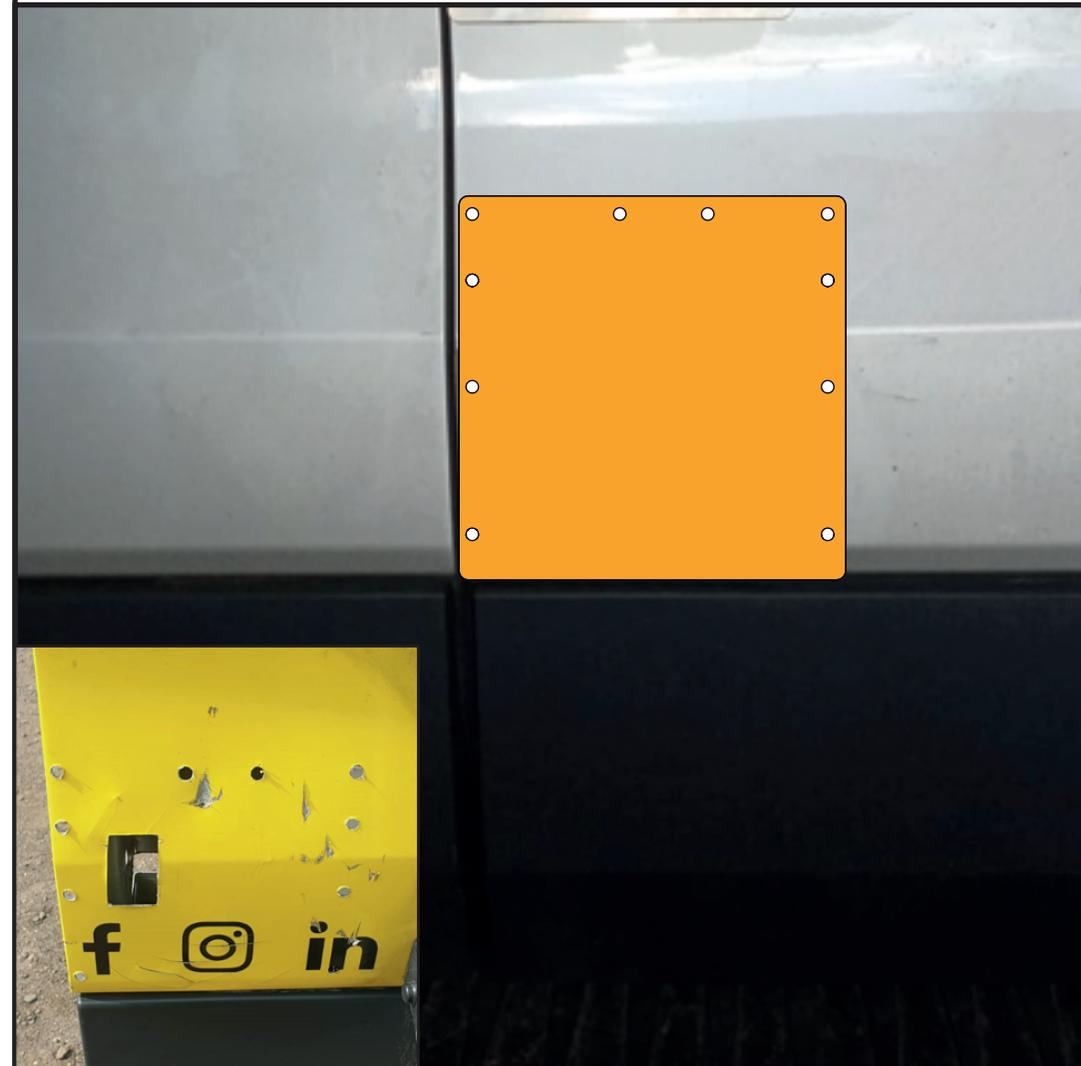

## 1. REMOVAL OF DOOR PANEL

Unclip and remove the lower door panel. Remove 3X T25 torx screws and then unclip plastic trim so the membrane can be carefully peeled back.

## 2. POSITIONING THE SHIELD

1. Protect the area of the door where the shield will be fitted with masking tape.
2. Use the rubber gasket as a template to mark the hole positions. Make sure the gasket is orientated correctly with the yellow backing facing you. The rubber gasket is profiled 1.5mm smaller than the shield so it needs to be offset 1.5mm from the edge of the door.
3. Mark down the ten hole centres.
4. **With the door open**, carefully drill the fixings holes, using a 4mm pilot then opening to 8mm. Remove any swarf and treat bare metal with anti-corrosion spray.

### 3. FITTING THE SHIELD

Stick the rubber gasket to the outer shield and then place the shield in position, from the inside place the internal bracket in position as shown and secure in place with M6 nyloc nuts and M6 washers. Use the small washers (FX4017) on the four positions down the edge of the door and the large washers (FX4013) in the remaining locations. **Take care not to overtighten the nuts.** Once fitted, refit the door panel.
