# FITTED IMAGE

## 1. REMOVAL OF THE DOOR PANEL

Remove door panel by removing the panel clips, to remove clips pull out the centres. Peel back the plastic membrane to allow access to the door cavity.

## 2. POSITIONING THE SHIELD

1. Protect the area of the door where the shield will be fitted with masking tape.
2. Use the rubber gasket as a template to mark the hole positions. Make sure the gasket is orientated correctly with the yellow backing facing you. The rubber gasket is profiled 1.5mm smaller than the shield so it needs to be offset 1.5mm from the handle.
3. Mark down the eight hole centres.
4. **With the door open**, carefully drill the fixings holes, using a 4mm pilot then opening the 5 x M6 holes to 8mm and the 3 x M5 holes to 7mm. Remove any swarf and treat bare metal with anti-corrosion spray.

### 3. FITTING THE SHIELD

Stick the rubber gasket to the outer shield and then place the shield in position. Secure in place with the 3 x M5 nyloc nuts and 3 x small washers on the edge of the door and the 5 x M6 nyloc nuts and 5 x large washers on the remaining studs. **Take care not to over-tighten the nuts.** Once fitted, refit the door panel.
