

Adjustable Gate Latch

Engineered Gate Installations

The Adjustable Gate Latch, part of the Gate Solutions by Codelocks Range, provides a reliable solution for gate applications where the gap between the gate and the post exceeds the range of a traditional mortice latch. Designed with precision and adaptability in mind, this latch features a manually adjustable bolt, allowing for secure fitting where conventional hardware cannot reach.

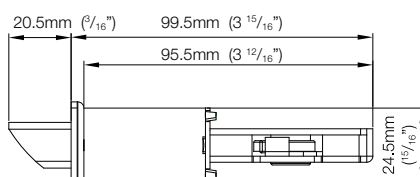

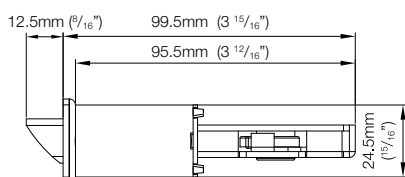

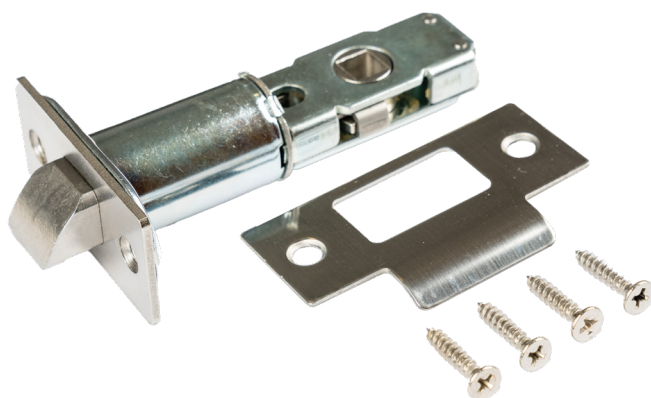

Ideal for both retrofit and new installations, the Adjustable Gate Latch offers durability and ease of use, with a locking mechanism that prevents further adjustment once installed. Built for external environments, it ensures long-term performance in challenging conditions. An astragal plate is recommended to avoid manipulation of the latch to gain unauthorised access.

- **Gap solution:** Designed specifically for gates with a larger-than-standard gap between gate and post.
- **Secure mechanism:** Adjustment is only possible by removing forend once access gained through gate by code holder.
- **Flexible installation:** Suitable for both retrofit and new-build applications.
- **Heavy-duty construction:** Built to withstand frequent use and outdoor conditions.
- **Simple Adjustment:** Latch bolt adjustable from 12.5mm ($\frac{9}{16}$ "") up to 20.5mm ($\frac{13}{16}$ "").

The latch bolt can only be adjusted once the gate is opened with a valid code. Once open the screws securing the forend are removed, taking the forend off, and rotating the latch bolt in or out as required.

Gate Solutions by Codelocks

Gate Solutions by Codelocks provides a comprehensive range of products tailored for seamless gate installation. Designed for secured perimeters and outdoor areas, these solutions offer easy-to-use, effective access control that's perfect for both residential and light commercial environments.

Applications

- Residential and commercial gates
- Outdoor security enclosures
- Access control in perimeter fencing
- Retrofitting non-standard doorways

For installers and specifiers seeking a dependable, adaptable latch system for gates with wider gaps, the Codelocks Adjustable Gate Latch delivers the quality and reliability Codelocks is known for.

Key Features

- Heavy duty
- 70mm ($2\frac{9}{8}$ "") backset only
- External applications
- Codelocks compatible
- Fully adjustable mortice latch bolt
- Supplied complete with CL400, CL500 and CL5000 ranges
- Rotatable latch bolt with forend removed provides up to 20.5mm ($\frac{13}{16}$ "")

Compatible Codelocks

Works with all standard Codelocks using a mortice latch.

- CL400 Mechanical Range
- CL500 Mechanical Range
- CL5000 Electronic Range

Available Lock Finishes

Brushed Steel, Stainless Steel and Marine Grade.

Adjustable Gate Latch

Stock Item Code	Stock Item Name
0440 BK MG	CL440 Mechanical with Adjustable Latch, Black Marine Grade
0440 SS	CL440 Mechanical with Adjustable Latch, Stainless Steel
0445 BK MG	CL445 Mechanical with Adjustable Latch Passage, Black Marine Grade
0445 SS	CL445 Mechanical with Adjustable Latch Passage, Stainless Steel
0540 BK MG	CL540 Mechanical with Adjustable Latch, Black Marine Grade
0540 BK MG BB	CL540 Mechanical Back to Back Adjustable Latch, Black Marine Grade

5040 BS NET	CL5000 Electronic Adjustable Latch, Brushed Steel NetCode
PMLB 70/8 AD SS	70mm Adjustable Medium Latchbolt 8mm Square Follower, Stainless Steel

Compatible with Codelocks range:

CL400 Mechanical

Medium duty mechanical locks with full size lever handles. Code free and back to back options available.

CL500 Mechanical

Heavy duty lock range with tubular latch and lever handles. Code free and back to back options available.

CL5000 Electronic

Heavy duty electronic lock range with tubular latch, lock, full size lever handles and key override. Up to 80 User Codes.

Installation Note

The supplied latch is designed for use on gate applications where the gap between the gate and post exceeds the range of a traditional mortice latch. The latch bolt can be adjusted prior to installation and post installation by removing the latch faceplate, secured in place with two screws. The latch can only be adjusted once this plate has been removed.

To extend the latch bolt rotate anticlockwise **FIG A**

To retract the latch bolt rotate clockwise **FIG B**

The minimum projection is 12.5mm ($\frac{8}{16}$ "), and the maximum projection is 20.5mm ($\frac{13}{16}$ "). A 5mm ($\frac{3}{16}$ ") rebate is required to fit the latch face flush to the gate.

NOTE: An astragal plate should be fitted to the outside face of the gate to prevent the latch being manipulated.
