

Subject: Anti-Settling Agent Change Notification (Update)
EMEA P99, PAC33 and PAC33CF Primers

Coatings ES Bulletin No. C-ESB-26-35B
Update supersedes C-ESB-25-04

Issued by: James Trainer

Date 9th September 2026

Approved: Floriane Fourgeaud, Thomas Hachmi

Distribution: Global Distribution

Summary:

Due to changes in REACH regulation, the manufacturer of a proprietary Anti-settling agent has informed PPG of their intention to stop manufacture of the raw material. The manufacturer has proposed a change to an alternative anti-settling agent.

The Anti-settling agent is used in PPG EMEA coatings

- **Chromated Wash Primer P99**
- **Chromated Polyurethane Primer PAC33**
- **Chrome Free Polyurethane Primer PAC33CF**

This ESB provides an update on expected stock run-out date.

Detail:

Update in expected stock run-out: PPG have secured stock coverage of the current anti-settling agent to cover coatings manufactured until **end January 2027** (dependant on sales volumes).

The Anti-settling agent is inert and takes no part in the coating reaction or cured performance. The anti-settling agent is present at less than 0.5% by weight in the coating base and helps to facilitate re-homogenisation of the coating base on mixing.

Reformulation of the coatings, using the alternative Anti-Settling Agent, is progressing with the specification owners under change management to finalise the requalification.

- It is anticipated PAC33 will qualify before P99 Wash.
- As soon as qualification is completed, the new formulations will be introduced.

The impacted products and qualified specifications are listed in attachment 1 on pages 2.

Should you have any further questions, please contact PPG Aerospace Engineering Services.

Sincerely,

James Trainer
