Subject; Transfer to GB BPR

To whom it may concern,

We are updating our range of biocidal products to conform with the latest requirements of GB BPR for the sale of products containing ADBAC as an active ingredient.

These changes come into effect at the end of November 2023. It will mean we will cease to produce the current range of products on that date.

Current product sales can continue to end users until the end of May 2024 whilst all product usage should cease at the end of Nov 2024 at which point the product will need to be disposed of in accordance with local requirements.

Below is a list of the products affected along with what they will be changing to:

<u>Current Product</u>	<u>Current Code</u>	<u>New Product</u>	<u>New Code</u>
Bactericidal Hydroclean	C197	Biocidal Cleaner	C910
KR S2 Catering Sanitiser	C883	KR S2 Catering Sanitiser	C911
Country Fresh	C233	Country Fresh	C916
Germfree FAB	C161	Biocidal Cleaner	C910
Germfree 61	C998	Biocidal Cleaner	C910

One of the many benefits of reformulating our products to meet the new requirements is the increase efficacy of the products. Whereas the current product range is tested to bactericidal requirements, the new products have the added benefits of also having fungicidal, yeasticial and virucidal testing completed. Visibly, the KR S2 and Country Fresh products will remain the same whilst the fragrance in Country Fresh will also.

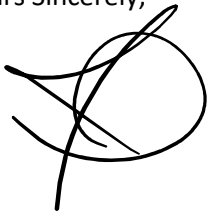

Over the coming weeks, we will be publishing our new TDS' to include the dilution rates required for the additional efficacy and these will be available from our website.

Please do not hesitate to contact us should you require any further information or if you have any related questions.

Further information can be found on the HSE website below.
