

## Product Owner - IoT & Video Service (w/m/d)

As a product owner, you will be responsible for defining, testing and delivering a constantly optimized IoT and video service experience that aligns with our vision and positively impacts our customers and overall business.

To be successful, you will need to bring a creative vision, superior problem-solving skills, great product instincts and have the ability to get things done.

### What you'll do:

- Have full product ownership for the Hardware Camera and Video Service solution
- Develop product vision, create new product ideas and get internal and external buy-in for both
- Translate product strategy into detailed requirements, epics and stories as basis for development
- Focus on user experience and develop products that users are really passionate about
- Scope and prioritize development activities while being part of the respective Scrum team
- Assume end-to-end responsibility for products from idea to the actual launch
- Strongly cooperate with Marketing, Sales and others to assure that products meet customer requirements
- Build awareness and understanding of products internally, with external partners and customers
- Manage commercial product success over time by applying product lifecycle management

### Requirements:

- BS/MS in Computer Science, Computer Engineering or Electrical Engineering
- Strong and proven work experience in delivering successful consumer products with demonstrable and measurable results (2-4 years). Product management experience with a leading tech company or an early/growth stage funded startup strongly preferred.
- Strong technical understanding of Internet Protocol (IP) based hardware products
- Deep understanding of cloud services and their impact on product development
- Excellent problem-solving skills along with an implementer and finisher mentality
- Track record of successfully managing and launching Consumer Products, preferably Consumer Electronics
- Experience using Atlassian JIRA or equivalent to manage backlogs and document features
- Excellent communication skills, written and verbal
- Excellent project management skills - capable of taking a concept all the way through development and launch

Extra Bonus points if you:

- Have previous IP camera or video-related product development experience
- Have worked with audio/video streaming (h.264/265, AAC, MP3, G.711, etc.)

### Benefits:

- A dynamic office environment at an international tech company in the heart of Berlin
- The exciting chance to help building an international brand and to develop new products
- A young and agile business with flat hierarchies
- Great potential to develop your career
- Flexible hours and working arrangements
- Attractive compensation package

Location: Berlin, Start: ASAP, Fulltime
