

Spirafix™ Anchors for Flagpoles

- **Quick & Simple to Use** - requires the installation of four Spirafix™ anchors using a lump hammer.
- **Fully Reusable** - when done unbolt the set screws, remove the base and then unwind the anchors out of the ground.
- **Easily Adjusted** - the base plates can be levelled by altering the height of each of the anchors. There is also a central slot that allows for multiple flag alignments.
- **Different Sized Spigots** - The base plate can take different spigots that cater for flagpole diameters from 39mm to 70mm.
- **Installation Templates** - Where multiple flagpoles are needed then the anchor installation can be speeded up by using templates that ensure the anchors are appropriately spaced.

Spirafix™ flagpole bases come in a four anchor design.

These use the standard range of 40mm diameter Spirafix™ anchors, either 390mm, 500m or 610mm in length depending on the height of the flagpole. The anchors can be installed using a lump hammer. For multiple installations our 40mm slide hammer can be used along with an anchor locating jig that ensures the correct spacing of the anchors.

Flagpole heights of up to 10 metres can be erected using this system.
