

rFactor2 Controller Setup

rFactor 2 requires the Controller.json file to be modified for the system to function properly just follow the instructions to install the files

Extract the Controller and Simforce Wheel Files to a convenient location

ie: Downloads

Goto:

Your Drive Letter:\Steam\steamapps\common\rFactor 2\UserData\Player and rename the Controller.json file to Controller_old.json

Copy the new Controller.json file and paste it into the same folder

This file is optional it contains our base controller setup for rF2

Goto:

Your Drive Letter:\Steam\steamapps\common\rFactor 2\UserData\Controller

Copy the Simforce Wheel.json file and paste it into the folder this will create a new wheel setup

Launch rFactor2

Goto Options/Controller select load and choose Simforce Wheel from the list

Always reduce the Overall Strength in Simucube to 30% to test and increase as necessary
