Agronomy Packs

Addition. Gatekeeper Desktop can now handle Agronomy Packs. An Agronomy Pack may contain two or more component products. Agronomy Packs are shown in Sentinel with a unit group of ha Dose and the component products are displayed with their Max Rate. Agronomy Packs may be setup in Stock or Catalogues by copying from the Sentinel Database. Once they have been added to Stock or Catalogues they cannot be edited.

LERAP

The LERAP buffer calculator has been adjusted to take into account the Agronomy Pack's multiple component products and will verify against the worst case scenario product in the pack.

LERAP buffer calculator has been removed from fields that contain plots.

Sentinel Verification

Sentinel Active Verification has been strengthened to allow Gatekeeper verification of Agronomy Packs.

Agrilator

A new function to help manage Agronomy Packs has been added to the Agrilator. If a Job contains an Agronomy Pack, when the Agrilator icon is clicked within the Product tab, The Agronomy Packs feature will be displayed allowing the user to change the rate of the Agronomy Pack or the rate of one of the products in ratio to the other(s).

Reports

Changed the following reports to display the component product details where an Agronomy Pack is used.

Recommendation Reports

- Recommendation Plan Fields First
- Recommendation Plan Fields First with Maps
- Recommendation Plan Products First
- Recommendation Plan Products first with maps
- Recommendation Plan Tabular
- Recommendation Plan

Work Plan Reports

- Work Plan Field
- Work Plan Field Landscape
- Work Plan Field with Maps
- Work Plan Field Summary
- Work Plan Tabular

Other reports changed to display Mapp # and/or Active Ingredients

- Traceability reports
- Catalogue and Stock Health Check
- Operator Data Sheet
- Product Data Sheet
- Stock Take
- In Stock
- Plan Work Completed
- Trading Work Completed

Templates

Agronomy Packs cannot be used in templates, therefore Site and Catalogue templates have been updated so that Agronomy Packs cannot be included.

Relationship Manager

Addition. There is now a new Relationship Manager in Setup Businesses that replaces the old Setup External Exchange button. Relationship Manger allows you to setup and permission data exchange with third parties relevant to your business.

In order to send a Recommendation from Gatekeeper Desktop to Gatekeeper Express an account must be setup in the Relationship Manager. The Account must be activated by entering the unique Exchange Key, found in Setup Businesses, within the Grower's Gatekeeper Express system. Once this has been completed, Recommendations can be passed quickly and easily to new Gatekeeper Express where they are converted into Jobs.
