

## Entering a harvest

In Business Manager and Cash Manager you can enter a harvest. To do this, go to Data Entry > Stock Movements > Produce.

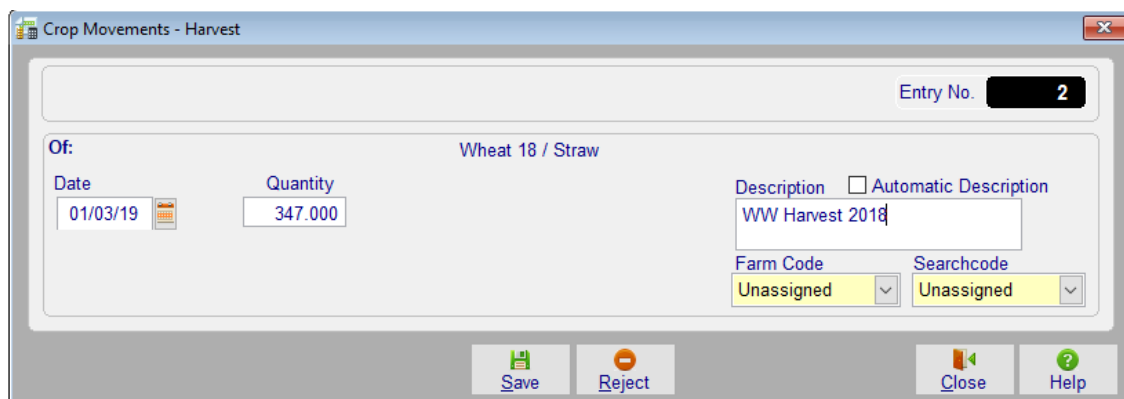

Select the enterprise i.e Winter Wheat 2018 and click on 'Enter' alongside Harvests

Enter the harvest date and the quantity harvested.

If you would like to add more detail, take the tick out of Automatic Description. You are then able to enter your own notes.

After pressing save, you can then enter a price per tonne against the harvest by clicking on

[Price Change](#)

Remember to give this price change the same date as the harvest.

This can be edited at any time by clicking on the  to the left of Price Change.

If you haven't done so already, you will probably want to create enterprises for next year's harvest i.e Winter Wheat 2019 so that you can allocate costs such as seeds and fertilisers to them.

To create these, go to Setup > Enterprises > Setup Enterprises.

1. Click on the drop down box next to Farming Year and select 2019.
2. Double click on Crops and Land on the left hand side and this will show a list of available enterprises.
3. Single click on each one in turn and on the right hand side you will see a 'Create' column. Tick this and save it.
4. If the column says 'Exists', then it has already been created.
