

Para/Ortho-Xylenes Methodology

22 August 2014

Date of last formal consultation: 1 October 2013

Expiry date of this methodology document: 3 January 2017

General methodology

ICIS continuously develops, reviews and revises its methodologies in consultation with industry participants. The product specifications and trading terms and conditions used are intended to reflect typical working practices in the industry.

ICIS publishes market assessments based on information gathered from market participants about: spot transactions, spot bid and offer levels, contract price negotiations, prices of related commodities, and relevant freight costs.

ICIS does not make retrospective adjustments or changes to price assessments based on information received after publication time or after any cut-off point specified in individual methodology documents.

ICIS regards all arm's-length transactions which meet its specification criteria as carrying equal weight.

ICIS uses proprietary models where necessary to normalise data to the typical specifications for cargo size and date ranges given for each commodity.

Some ICIS assessments are the product of calculation alone, for example in markets where insufficient market activity takes place to permit price assessment, or where a market itself habitually sets prices according to a formula. Such calculated assessments are noted as such in their detailed methodology specifications.

ICIS endeavours to cross-check all the transaction information it gathers. ICIS will not use information for assessment purposes where such checks call into doubt the accuracy of the original information, or where a transaction appears to have occurred under circumstances that render it non-repeatable or otherwise markedly unusual.

Rationale for paraxylene methodology

All ICIS-published spot assessments in the weekly paraxylene reports are so-called "week's range" assessments. That is, they are intended to represent the tradable value throughout the week leading up to the date of the report unless otherwise stated. For the daily paraxylene assessments in the Xylenes Daily (Asia) report, the price assessments are based on deals and discussions throughout the day although the bulk of discussions tend to occur in the second half of the day. ICIS will indicate days where closure of particular markets due to public holidays would result in non-publishing and non-assessment days. The full week is defined from the report's deadline, e.g. Friday 17.00 to the following Friday 17.00.

The value published is intended to reflect the real transactable value of a commodity during the course of the week. As such, transaction information would take precedence over bids and offers.

Where a confirmed deal is done for the same specification and loading range as confirmed bids and offers, and when all are declared to the market simultaneously, the deal will take precedence over the bids and offers. In illiquid markets, sole deals will be used together with bids and offers. In a liquid trading period, deals will form

the basis of assessments. In an illiquid market, a single or small number of deals will be included in the range, together with bids and offers. In the absence of any deals, bids and offers will be used. During the assessment process we may consider other information. However actual transactions, and bids and offers will always take precedence.

ICIS takes into account a wide range of market input in making such choices, and reserves the right to exclude from its analysis any price information deemed unreliable or unrepresentative of the market. ICIS commits to describing the information it deemed reliable in the market comment accompanying its assessments, including transactions, bids, offers and other market information used in making these assessments. This includes instances where ICIS typically makes assessments based on firm transaction or bid/offer information, but where that information was not available on a given day and alternative evidence was used.

Cargoes partially loading outside of the Assessed Trading Timeframe may be reflected in the assessment, but will not typically be used where there is deal/bid/offer information within the assessment period.

ICIS has adopted this “week’s range” methodology for **Paraxylene** reports based on several decades of market observation and feedback. Other measurement strategies, for example weighted averaging, are vulnerable to random variation in transaction levels and volume, which can give rise to distortions.

In addition, the exact volume of transactions for any given product is unknowable in advance, and a volume-dependent methodology is exposed to: a) the charge that lower volumes will result in less accurate prices, and b) to the possibility of failure in the event no transactions occur.

Recent changes to this methodology:

| Date | Price reference | Change |
|----------|-----------------|---|
| 12/05/14 | Europe PX/OX | Day changed to Tuesday + other maintenance |
| 19/08/14 | Asia PX/OX | Changes made throughout the different sections. |

Specifications for paraxylene/orthoxylyene

ICIS pricing quotes paraxylene and orthoxylyene in Europe, Asia-Pacific and the US Gulf.

Frequency:

- The Asia paraxylene daily assessments are published in the Xylenes Daily (Asia) report on Mondays to Fridays
- Para/Orthoxylene weekly (Asia-Pacific and the US) reports published on Fridays
- Para/Orthoxylene weekly (Europe) reports published on Tuesdays
- Real time Price Alert Service (PAS) for paraxylene delivering market news and trends throughout the day. For the Asia orthoxylene market, the PAS is updated towards the latter half of the week.

Specifications:

In Europe, the US and Asia, the paraxylene price quotes are based on product with 99.7% purity. Orthoxylene assessments are based on product with a minimum purity of 98.5% and a maximum non-aromatic content of 0.5%.

Timing:

In Europe, cargoes are typically for loading or delivered four weeks forward from the date of publication. In Asia, paraxylene and orthoxylene cargoes are for loading or delivered two to eight weeks forward from the date of publication. In the United States, waterborne volumes are for loading or delivery within four weeks.

Location basis:

For paraxylene in Asia, FOB Korea (Ulsan, Onsan, Daesan, Yeosu); CFR Taiwan (Kaohsiung, Taichung, Mailiao); CFR China Main Port (the main ports in China as defined by PX market players include Ningbo, Xiamen, Zhuhai, Jiangyin, Dalian); CFR SE Asia (Merak, Jakarta, Kuantan, Map Ta Phut).

For orthoxylene in Asia, FOB NE Asia (Ulsan, Onsan, Daesan, Yeosu, Kaohsiung, Taichung, Mailiao); CFR NE Asia (Ulsan, Onsan, Daesan, Yeosu, Kaohsiung, Taichung, Ningbo, Xiamen, Zhuhai, Jiang Yin); CFR SE Asia (Kuantan, Jakarta, Bangkok).

Assessment window:

Weekly price assessments are based on information supplied by market participants through the week up to the close of business on Tuesday at 1700 hours in London, Fridays at 1700 hours in Houston (US Central Time), and at 1730 hours in Singapore. The daily Asia paraxylene price assessments in the Xylenes (Asia) daily report are based on information gathered throughout the day, including the day's bid-offer range and all deals done during the day, up to the close of business at 1730 hours in Singapore.

In Asia, ICIS assesses the premiums/discounts for paraxylene spot cargoes traded on a 50% Asia Contract Price + 50% spot average of published CFR Taiwan/China Main Port for delivery to any China Main Port and Taiwan. The premiums/discounts are

assessed in line with the general methodology, with deals taking precedence over bids and offers. On days without deals, the assessment will reflect bids and offers.

Terms:

Typically 30-60 days after bill of lading date. In Asia, typical credit terms for paraxylene and orthoxylene are up to 60 days. Variance to these terms in a spot transaction may lead to ICIS disregarding the transaction for assessment purposes.

ICIS may also perform a normalising procedure for transactions that were done on a LC 90 days basis using the prevailing inter-bank exchange rate.

Standard cargo size:

Paraxylene in Europe is typically 1,000 tonnes and 5,000 tonnes in Asia and the US, unless otherwise stated. In Asia, deals of at least 5,000 tonnes each done via pipeline with no freight costs are also considered in FOB assessments.

Orthoxylene in Asia is typically 1,000-3,000 tonnes. European spot cargo sizes are typically 1,000 tonnes. In the US, cargoes are typically 3,000-5,000 tonnes depending on destination.

Normalisation:

In exceptional cases where the lack of liquidity represents a challenge in making assessments, editors can choose to adopt a normalisation process to include deals/trades information which falls outside the standard specifications listed in the methodology pertaining to, but not limited to, volume, timing, delivery, payment terms, import tariffs, product specifications and other operational matters. The normalisation process adopted should be in line with standard practices and will only be used either as a reference for assessments, or be included as part of the assessment range. Where normalisation has occurred and has been reflected in a published price assessment, this will be described in the text of the report and the process will be described and justified.

Assessment Basis:

In **Europe**, the price spread for the week represents deals done. When there are insufficient deals in the week to establish a representative weekly range and relying on deals alone does not reflect the market fairly and objectively for the week, ICIS pricing reserves the right to make an editorial judgment based on a combination of: the correlation between the current month and forward month; and bids and offers for that month.

The monthly contract price is quoted as soon as confirmation has been received from a representative number of arm's length contractual partners. The market commentary will normally cover details of contracts, negotiations, spot prices, production issues, relevant logistics, derivatives markets and energy prices.

The paraxylene section of the European report includes information on contract price discussions and agreements and a detailed update on the spot market. Spot deals are reported, typically on an FOB Rotterdam basis. Transactions may include both trade and industry players and may involve product for use within Europe or for export to Asia or the US. Prices are often volatile, and may change significantly, meaning there are frequently opportunities for arbitrage and movements of product between regions.

The ICIS **Asia-Pacific** paraxylene weekly spot prices are assessed in two ways: 1) information collected on Friday up to the day's close indicated by (*), and 2) based on the week's deals and discussion levels indicated by (+).

The mid-point of the weekly paraxylene price assessments (ICIS Midpoint) is derived by mathematically calculating the average of the daily price assessments. As such, the mid-point represents the mean/average level which attracts the greatest number of trades concluded within the week. The paraxylene weekly price range is formed by adding +1 / or -1 to the ICIS Midpoint. This is in line with the market accepted trade practice.

For the Premiums/Discounts 50% ACP: 50% Spot Average of CFR Taiwan/China Main Port (+) Assessment in the Asia paraxylene report, the premiums/discounts are assessed based on the average of the daily premiums/discounts for the assessed period.

The premiums/discounts assessments disregard paraxylene of Taiwanese and South East Asian origins, as import tariff rebates on cargoes of these origins are changeable, dictated by the agreement between the supplier and the buyer. In addition, such cargoes command a considerable premium/discount. The premiums/discounts assessments are in line with the general methodology. A deal done on a premium/discount basis presides over the bids and offers. In the absence of deals, the best bids and offers will form the assessment.

When trade is illiquid in the Asian paraxylene markets and there are insufficient deals in the week to establish a fair representative weekly range, ICIS will exercise editorial discretion using a combination of: 1) the correlation between the current month and forward month; 2) and best bids/offers for that month.

The ICIS Xylenes Daily (Asia) report includes paraxylene spot transactions in USD/tonne on a CFR Taiwan/China Main Port and FOB Korea basis. On days with deals, the assessment will reflect deals only. On days without deals, the assessment will reflect bids and offers only.

In the absence of paraxylene trades and price discussions, ICIS will assess the daily and weekly **FOB Korea** prices based on a netback calculation, i.e. subtract freight components from CFR prices to derive FOB prices, and the differential between the CFR SE Asia and CFR China prices, as indicated by market players, will be applied to derive the **CFR SE Asia** daily and weekly assessments.

ICIS reserves the right to disregard discussions/deals for paraxylene paper swaps, which are negotiated on a 1,000 tonne basis, should they fall significantly out of line from price assessments for the physical market, which is usually negotiated on a 5,000 tonne basis.

For Asia, the paraxylene ICIS Contract Price will reflect the month's Asian Contract Price (ACP) settlement price when there is a full or major settlement of the ACP.

The suppliers who participate in the ACP negotiations are JX Nippon Oil & Energy, ExxonMobil, Idemitsu Kosan, & S-Oil, and the buyers are Yisheng Petrochemical, Mitsubishi Chemical, Mitsui Chemical, CAPCO, BP, & OPTC.

A full settlement of the ACP is defined as when all the suppliers and buyers agree at a single price for the month's ACP. A major settlement is defined if two suppliers and two buyers agree the month's ACP at the same price.

A partial settlement of the ACP is defined as when a supplier settles its monthly contract price with different buyers at different levels, or when a buyer settles its monthly contract price with different suppliers at different levels.

In the absence of a full, major or partial settlement of the ACP, ICIS will use the average of the daily and weekly CFR China Main Port spot prices to form the assessed ICIS Contract Price.

When there are two or more partial settlements for the ACP, the ICIS Contract Price will reflect the lowest and the highest partial settlement price.

When there is only a single partial settlement, the confirmed price will form either the high end or the low end of the ICIS Contract Price, and the other end of the range will be based on the average of the weekly CFR China Main Port prices for the assessed month.

The quarterly contract price in the Asia paraxylene report is a simple average of the three monthly contract prices for the same quarter. The Delivered China monthly contract price reflects Sinopec's monthly contract settlement price with its customers.

In the US report, the paraxylene spot price assessment is currently based on a relationship to the Asian spot price, due to the lack of US spot liquidity.

In the Asia-Pacific orthoxylene weekly report, the CFR NE Asia assessment reflects primarily material imported into China. It also includes cargoes imported into Taiwan

and South Korea. A confirmed deal takes precedence over the bids and offers if they are all for the same cargo specification and loading dates. In a liquid market, deals will form the basis of the orthoxylene assessments. In illiquid markets, the assessments will reflect deals, bids and offers.

In the absence of deals during the week, the orthoxylene assessments will be based on best bids/offers obtained from Wednesday to Friday to establish a weekly range that is most workable in the prevailing market dynamics.

To derive the orthoxylene CFR SE Asia assessment, the FOB prices of the different supply sources are calculated based on a netback from the CFR China price, and added to the prevailing freight rates to southeast Asia. For example, for Indian cargoes sold to southeast Asia, the FOB India price is calculated by subtracting the freight component from the CFR China price of Indian cargoes. The FOB India price is then added to the prevailing India-southeast Asia freight rate to derive the CFR SE Asia price. For Thai cargoes sold into southeast Asia, the FOB Thailand price is calculated by subtracting the freight component from the CFR China price of Thai cargoes. The FOB Thailand price is then added to the prevailing Thailand-southeast Asia freight rate to derive the CFR SE Asia price.

Paraxylene (EUROPE)

Weekly Price Assessments:

Paraxylene Contract Price

- FD NWE monthly (EUR/MT & conversion to US CTS/LB)

Paraxylene Spot Prices

- FOB RDAM (USD/MT & conversion to US CTS/LB)

NOTE: Price range for the week

Orthoxylene (EUROPE)

Weekly Price Assessments:

Orthoxylene Contract Price

- FD NWE (quarterly) (EUR/MT & conversion to US CTS/LB)

Orthoxylene Spot Prices

- FOB RDAM (USD/MT & conversion to US CTS/LB)

NOTE: Price range for the week

Paraxylene (ASIA-PACIFIC)

Daily Price Assessments:

Paraxylene Spot Prices

- FOB KOREA (USD/MT & conversion to US CTS/LB)
- CFR TAIWAN (USD/MT & conversion to US CTS/LB)
- CFR CHINA MAIN PORT (USD/MT & conversion to US CTS/LB)
- PREMIUMS/DISCOUNTS ON 50% ACP: 50% SPOT AVG OF CFR TAIWAN/CHINA MAIN PORT

Weekly Price Assessments:

Paraxylene Spot Prices

- FOB KOREA (*) (USD/MT & conversion to US CTS/LB)
- CFR TAIWAN (*) (USD/MT & conversion to US CTS/LB)
- CFR CHINA MAIN PORT (*) (USD/MT & conversion to US CTS/LB)
- CFR S.E.ASIA (*) (USD/MT & conversion to US CTS/LB)
- PREMIUMS/DISCOUNTS 50% ACP: 50% SPOT AVERAGE OF CFR TAIWAN/CHINA MAIN PORT (*)
- FOB KOREA (+) (USD/MT & conversion to US CTS/LB)
- CFR TAIWAN (+) (USD/MT & conversion to US CTS/LB)
- CFR CHINA MAIN PORT (+) (USD/MT & conversion to US CTS/LB)
- CFR S.E.ASIA (+) (USD/MT & conversion to US CTS/LB)
- PREMIUMS/DISCOUNTS 50% ACP: 50% SPOT AVERAGE OF CFR TAIWAN/CHINA MAIN PORT (+)

NOTE: (+) Price range for the week (*) Price range at close of business Friday (1730 hours)

Paraxylene Contract Prices

- CFR ASIA Quarter (USD/MT & conversion to US CTS/LB)
- CFR ASIA Month (USD/MT & conversion to US CTS/LB)
- DELIVERED CHINA Month (CNY/MT & conversion to US CTS/LB)

Orthoxylene (ASIA-PACIFIC)

Weekly Price Assessments:

Orthoxylene Spot Prices

- CFR N.E.ASIA (USD/MT & conversion to US CTS/LB)
- FOB N.E.ASIA (USD/MT & conversion to US CTS/LB)
- CFR S.E.ASIA (USD/MT & conversion to US CTS/LB)
- CFR INDIA (USD/MT & conversion to US CTS/LB) #

Paraxylene (US GULF)

Weekly Price Assessments:

Paraxylene Contract Prices

- DELIVERED monthly (US CTS/LB & conversion to USD/MT)

Paraxylene Spot Prices

- FOB EXPORT (US CTS/LB & conversion to USD/MT)

Orthoxylene (US GULF)

Weekly Price Assessments:

Orthoxylene Contract Prices

- FOB monthly (US CTS/LB & conversion to USD/MT)

Orthoxylene Spot Prices

- FOB EXPORT (US CTS/LB & conversion to USD/MT)

Other principles and guidelines

Changes to methodology

All markets evolve and ICIS has a duty to ensure its methodologies for market-reporting evolve in step with markets.

ICIS therefore regularly conducts internal reviews of the appropriateness of its methodologies, based on industry feedback.

Draft changes are then made public and comment requested from industry participants, with a minimum one-month notice period, except where, exceptionally a *force majeure* event (natural disaster, war, bankruptcy of a trading exchange etc.) makes necessary a shorter notice period.

ICIS is committed to reviewing all comments on proposed methodology changes, but in some cases may find it necessary to alter its methodologies against the wishes of some market participants.

In addition, ICIS has a formal methodology consultation process. The company commits to holding this consultation every three years for the Paraxylene Reports. The date of the last consultation launched and the expiry date by which the company commits to conducting the next consultation can be seen at the top of the methodology document.

Please also refer to the Methodology Consultation Process section of the company's Compliance Manual. This contains detailed flow charts documenting the internal and external review and consultation process.

Consistency

ICIS achieves consistency between its assessors in exercising their judgement by requiring all assessors to follow this detailed methodology as well as the company's Editorial Standards document. In addition, ICIS reporters are required to complete standard training before undertaking the work of a market reporter. Every reporter's work is spot checked.

Data standards

ICIS has a public Data Standards Policy which covers the type and quality of information we ask market participants to report.

The following principles relate to ICIS paraxylene assessments and commentaries:

- *Where possible, please allow access to active market traders and allow them to comment on active news stories.*
- *Where possible, please provide market data from both front and back-office functions.*
- *Where possible, please provide complete data and not a subsection.*
- *Flag inter-affiliate transactions.*
- *Flag spread trades.*
- *When a source or contact leaves the organisation please contact ICIS to the replacement (ICIS requests that both the source and the organisation contacts them).*
- *Where information is not validated by the source (i.e. rumour) please indicate as such.*

Delivery locations for price assessments

Locations for ICIS paraxylene assessments are chosen to reflect the concentration of liquidity on the traded markets.

Exercise of judgement

Apart from instances where data may be excluded (see below), ICIS will typically exercise judgement where market information about firm bids and offers or transactions is not available.

In most cases this will involve the application of spread trade information or prevailing market relationships, detailed in the specifications section for each grade in this document.

ICIS will also exercise judgement where only a bid or offer is available, or where a bid/offer spread is so wide as to be unhelpful in establishing tradable value. In both instances, spreads to other grades or prevailing market relationships will typically be used to assess the price. In these cases the assessment will still fall above the highest firm bid and below the lowest firm offer, as long as the bid and/or offer information meets all other criteria specified in this methodology.

Exclusion of data

In line with its Editorial Standards policy, ICIS reporters actively seek to identify anomalous market information and exclude it from the assessment process. For crude market assessments, this is done by the daily information gathering and verification process carried out by reporters, whereby market transaction, bid and offer information is confirmed and verified by multiple sources.

In assessing paraxylene markets, ICIS takes into consideration only arms-length transactions between non-affiliated parties.

ICIS does not accept bids or offers that are not firm. Any bid or offer which is demonstrably not firm will be disregarded and further bids or offers from the same counterparty may also be disregarded.

ICIS also excludes from its assessments transactions where ICIS market reporters have reasonable grounds to doubt that a transaction is representative of typical market behaviour: for example, where a deal is concluded disregarding the best bid or offer on the market; where there is evidence that a market participant has disclosed only part of its market activity to ICIS; or where a transaction lies outside the prevailing range of typical market activity.

ICIS records instances of anomalous data and reviews these instances on a regular basis with a view to determining if a pattern exists.

Where market reporters have concerns over the behaviour of a market participant, this will be escalated using the ICIS Escalation Process for Compliance and Regulatory Issues. This can be found in the company's Compliance Manual.

Market communication

ICIS communicates with a broad range of market participants – traders, brokers, back-office employees, supply managers, operations personnel and company executives – to obtain market information.

ICIS communicates with participants by telephone, email, instant messenger and in person. All instant messenger, email communication and notes of any face-to-face communication are archived and details of telephone communication are logged and data-based.

ICIS does not accept instant messenger communication from unknown parties, and reporters are required to verify a market participant's identity prior to using IM communication.

ICIS does not regard in any way as binding attempts by companies to restrict ICIS communication with their employees. ICIS has a duty to its subscribers to obtain the maximum possible amount of market information. ICIS treats all communication from market participants as confidential.

ICIS reporters are bound by a Code of Conduct to report to their superiors any coercive or threatening communication from market participants, or any offers of inducements of any kind intended to influence an assessment.

Where improper communication appears to have taken place, ICIS will communicate in the first instance with senior management at the company or companies involved, and if necessary with relevant market authorities.

ICIS expects the highest standards of propriety from all market participants, and regards all communications from market participants as representative of the views of an individual's employer.

ICIS is committed to the highest levels of customer service, and has a formal feedback and complaints policy, which can be viewed here:

<http://www.icis.com/about/icis-feedback-policy/>

Market data verification

ICIS will always make best endeavours to confirm bids, offers and transactions with the relevant party/parties. ICIS attempts to cross-check all market data received from a buy or sell-side participant with a participant's trading counterparty.

Where both counterparties to a transaction cannot or will not confirm the data, ICIS seeks corroboration from other market sources.

Where transaction or bid/offer information has been received from a trader rather than from a company's back office, ICIS always seeks confirmation from other sources.

Where ICIS has grounds to doubt an item of market data, it may request further evidence that a transaction has taken place, including documented evidence.

ICIS treats transaction data received from active brokerages as confirmed.

On occasion, in markets with low liquidity and a low number of counterparties, ICIS may choose to use unconfirmed data, but only in so far as it is aligned with other market information and comes from a source deemed reliable by ICIS based on previous interactions.

Minimum data threshold

Because of the sometimes thinly traded nature of some markets, ICIS does not have a minimum data threshold for its assessment methodologies in this market.

ICIS makes clear in its daily market comments whether it has assessed a price based on transaction or bid/offer data or whether it has used other forms of evidence or calculation.

Selection of participants

ICIS policy on general market data is that we welcome all information regardless of source or constitution as long as it is provided in good faith as true.

However, only active market participants verified as such by existing active industry participants and verified as a viable business by ICIS investigations will be allowed to contribute price data to ICIS for the purpose of assessing tradable market value under this methodology.

Unit prices and credit terms

Paraxylene in all regions is generally traded in US dollars/tonne, cents/lb or euros/tonne and therefore all price assessments are quoted on these bases.

Typical credit terms for paraxylene are 30-90 days from Bill of Lading date.

Volumes

For each region ICIS publishes the standard cargo size, found in the specifications sections of this methodology document. Market information for cargoes conforming to these standards will be fully considered in the assessment process, providing the information conforms to all other specifications and conditions published in this methodology.

As indicated earlier, if ICIS has market information regarding cargoes outside of these published ranges, it will be normalised together with any standard-sized cargo information. In this case, ICIS will seek to establish whether there is a market price premium or discount for the non-standard cargo and apply this for the purpose of making its assessment.

General Methodology Guide for ICIS Chemicals

ICIS endeavours to provide a fair and timely representation of traded prices, which could be used as an effective reference point for market participants. As no two markets are the same, ICIS hopes to tailor methodologies which reflect the needs of each specific commodity market it covers based on factors such as, but not limited to, geography, trade flows/logistics, market size, product characteristics, participants and regulation. ICIS adopts an open policy to feedback regarding its methodology and will conduct reviews on a regular basis.

Spot range assessments

Published daily and weekly, these delineate the typically tradable range for a full working day or week.

The range is normally established using verified typical transactions and standardized atypical transactions.

In the event that no relevant transactions have occurred in the assessed period, ICIS will establish a range using bids and offers for typical spec material; and using established market relationships resulting from manufacturing economics, product linkages, freight and forward markets.

ICIS Mid-Point

Established referencing to ICIS prices often refer to the mid-point of the range as the fair representation of the commodity's traded value.

Weekly range assessments are marked in some ICIS reports with a "+" to distinguish them from spot close assessments (see below).

Instrument function: In liquid markets, ICIS would typically focus on the majority traded principle which would typically exclude deals considered to be outlier deals and unrepresentative of the general market consensus. Provides overview of market activity over course of one day in the case of daily reports, or one week in the case of weekly reports. Any change in assessment periods as a result of public holidays arising in any given week will be indicated via subscriber notes. Width of range offers insight into current levels of market volatility, and could also infer associated differentials caused by logistical and product variances.

ICIS endeavours to keep a tight range through maintaining detailed methodologies but this is difficult in thinly traded markets. Variable range width means assessment trades off accuracy for inclusivity, and transparency is reduced vis-a-vis spot close assessment. Suitable for inclusion in averaging mechanisms and market analysis tools.

Spot close assessments

Published daily and weekly, these reflect the transactable market value of the assessed product at the close of business for the assessed period (daily or weekly). Assessments are nevertheless shown as a low-high range, indicating the "space" in which a transaction is deemed to have been possible at the specified time. This low-high is typically tighter than that shown in a Spot Range assessment. The assessment is established taking into account:

- typical, repeatable transactions at arm's length between non-affiliated market participants;
- standardized "atypical" transactions, where it is possible to derive a typical equivalent market value for a transaction which does not conform to standard specifications;
- bids and offers for typical spec material;
- movements in related markets. In the absence of reliable, confirmable market information for a specific commodity, ICIS reserves the right to compute changes in specific assessments based on established relationships derived from manufacturing economics, product linkages, freight, and forward markets.

Weekly/Daily Spot Close assessments are marked in some ICIS reports with a "*" to distinguish them from Spot Range assessments (see above).

Where possible, editors will indicate any weightage used for spot close assessments which are weighted towards an active period.

Instrument function: Reflects most recent tradable market value with high transparency and high accuracy. Suitable for inclusion in averaging mechanisms and market analysis tools.

Indexes

In some markets, ICIS publishes volume-weighted averages– known as "indexes" or "indices" – of verified typical transactions over specified periods, either daily or weekly.

Inputs to an index are checked editorially for conformity to specification and statistical outliers are eliminated. See individual methodologies for details.

Instrument function: An index is a mathematically derived indicator of typical traded value over a given period. Because it is an average, the deviation from the last transacted value at the close of business could be substantial, depending on the time period assessed hence does not always provide a currently transactable price indication.

Contract reference prices

These are publicly announced, often single number, reference contract prices, agreed in multilateral negotiations and used as a base price for contractual sales of material by producers, typically between major producers and large end-users. ICIS publishes Contract Reference prices once confirmation is obtained of at least two agreements between recognised contract partners of significant size. Note that the date of publication can vary for each contract period depending on the speed of industry negotiations.

It is common for discounts to be associated with announced contract prices, which are usually not common knowledge.

Instrument function: Contract reference prices are used in some markets as the basis for monthly or quarterly contracts and form the basis for further negotiations between producers and buyers on volume-related discounts or premiums.

Contract price assessments

Published weekly, these reflect the achievable “base price” for contractual sales of material by producers, either to onward “distributors” or direct to end-users. Prices, typically valid either for one month or for three, are arrived at by negotiation between producers and buyers, and are updated by ICIS once confirmation is obtained of agreement between major producers and typical buyers of the size indicated in individual specifications. Note that most contract prices are agreed as a base from which discounts or premiums are given to individual buyers, and that the size of these discounts typically varies based on the volume purchased over the contract period by the buyer.

In the event that market participants fail or decline to confirm outright contract price levels to ICIS, ICIS reserves the right to make its assessments of achievable contract prices based on established market relationships derived from manufacturing economics, product linkages, freight, and forward markets.

Instrument function: Provides view of baseline for currently prevailing contract mechanisms, where these are statically determined – that is, bilaterally negotiated contracts not based on automated averaging of spot market prices.

Distribution indicators

Published weekly for some markets, these reflect contract prices net of known discounts to typical-sized product distributors. See individual methodology statements for details.

Instrument function: Provides additional insight into typical prices paid by buyers in statically determined (ie bilaterally negotiated contracts not based on averaged spot market prices).

Margins

Published in ICIS Margin Reports, margin prices reflect computed differentials between different products related through the processing chain.

Instrument function: Provides insight into supply chain economics and industry profitability. A useful reference for baseline production cost calculations, particularly by tracking the margin shifts across different periods. Theoretically determines scope of pricing further along processing chain. Note that market behaviour sometimes violates apparent margin economics. Suitable for in-depth market and industry analysis.

List or posted prices

Published weekly for some markets, these are released by manufacturers as suggested selling prices. In many cases, these prices are reduced after negotiations with buyers. Price changes are sometimes used as important references for negotiations in thinly traded markets.

Price changes

The change in prices from the previous period is indicated in blue as an increase (+), in red as a decrease (-) or no change (n/c) or not assessed (n/a). Changes for prices at the low end of each range are shown at the left and changes for prices at the high end of each range are shown at the right. Changes in weekly spot prices represent the changes from the previous week and changes in monthly or quarterly contract prices represent the change from the previous month or quarter.

Report name

Some reports cover a range of products. Trade in product of inferior quality (off-spec) is taken into consideration when it affects the market for material that meets standard specifications. Reference to off-spec/distressed cargo is at the discretion of the editor.

Periods referred to in contract price quotations are either months (noted by standard abbreviations) or quarters of the calendar year.

Q1 January February March
Q2 April May June
Q3 July August September
Q4 October November December

Feedstock prices

Contract prices for certain feedstocks are shown where appropriate. In all cases where feedstock prices are shown, they have been taken from the current ICIS pricing report for the product.

Date

ICIS pricing reports are written on the day of publication. The only exceptions are when a public holiday impacts the market. In some circumstances reports will be compiled one or a maximum two days early. When this occurs, it is clearly marked on the report. ICIS pricing provides daily and weekly pricing reports. Deadlines (unless otherwise specified in the methodology) are 1700 hours local time in London, Singapore, Shanghai and Houston. Market close prices refer to this deadline, unless specified otherwise.

Contract price assessments are updated in reports as soon as possible after confirmation is obtained of contract settlement. Because the amount of time required to reach contract agreement varies from month to month, it is not possible to guarantee publication of monthly contract prices at the same point in each month.

Note that information received after the relevant close cannot be used for assessment purposes, nor can a correction be issued based on subsequently received information.

The date of publication is not altered in the event of public holidays. All weekly reports are published at least 50 times per year. Certain reports are not published during a two-week period in late December/early January. Daily reports are published five times per week, but may not appear on certain days due to public holidays. Please refer to the ICIS pricing publishing schedule for more detailed information.

Geographical regions

ICIS pricing normally covers products on a regional basis to ensure the main drivers impacting the market in any given area are adequately covered. Reports are currently issued covering Europe, the Middle East, Asia or Asia-Pacific, China, India, West Asia, the United States or North America, Latin America, and the Former Soviet Union.

Within these broad areas the most common quotations comprise:

| | |
|-----------|--|
| NWE | mainland Northwest Europe (N.France, N.Germany, Benelux) |
| Med | Southern France, Spain, Italy |
| NE Asia | Taiwan, Korea, Japan, China |
| SE Asia | Singapore, Philippines, Indonesia, Malaysia, Thailand, Vietnam |
| West Asia | Pakistan, India |
| East Asia | NE Asia & SE Asia |
| GCC | Bahrain, Kuwait, Oman, Qatar, Saudi Arabia, UAE |
| E.Med | Greece, Israel, Egypt, Syria, Jordan, Lebanon |

| | |
|-----|---|
| FSU | Former Soviet Union: Russia, Ukraine, Belarus, Uzbekistan, Kazakhstan |
| USG | US Gulf |
| CMP | China Main Port |

| | |
|-----------------|--|
| Northern Africa | Morocco, Algeria, Tunisia, Libya, Egypt, Sudan |
| Eastern Africa | Eritrea, Djibouti, Somalia, Kenya, Tanzania |
| Southern Africa | Namibia, Mozambique, South Africa |
| Western Africa | Mauritania, Senegal, The Gambia, Guinea-Bissau, Guinea, Sierra Leone, Liberia, Côte d'Ivoire, Ghana, Togo, Benin, Nigeria. |

Quotation basis

Prices are quoted with reference to the terms and location of delivery. The period of delivery is also quoted for contract prices. Assessment windows vary from product to product for spot sales. See specific product entries in the Methodology for further details.

Incoterms devised by the International Chamber of Commerce are mainly used to indicate what costs are included in the price. Assessments do not include Value Added Tax (VAT). Terms regularly used in ICIS pricing reports can be found in the Glossary.

Units

Prices are quoted in the currency and unit measure relevant to the particular market. Most chemicals are quoted in US dollars per metric tonne (\$/MT), although euros per metric tonne (€/MT), US cents per pound (US CTS/LB) or US cents per gallon (US CTS/GAL) are frequently used. Historical data includes assessments previously measured in European currencies superseded by the euro.

Conversions (weights and measures)

Prices are converted to other currencies and unit measures for ease of reference. Conversions are derived from the quoted price assessments using standard rates of conversion and current exchange rates. Conversions involving weights and volumes are calculated within industry acceptable ranges, which vary from product to product according to specific gravity (e.g. USD/MT to CTS/GAL).

Foreign exchange rates

ICIS provides exchange rates for a variety of international currencies that are time aligned with publication of our pricing reports and consistent for analytical use when

applied to historical pricing data. Because of our publishing schedule, certain rates used in some reports may be changed as data moves into a historical database. The ICIS methodology used is as follows:

Rates are not established by ICIS pricing but are published by arrangement with Xenon (www.xe.com). The exchange rates shown are those in effect at the time and date indicated, normally around 17:15 hours in London on the day of publication. They are not a mean or average of exchange rates in effect during the period since the report was last published, but reflect a mean of the bid/offer at the time taken for that particular day. Exchange rates published by ICIS pricing are intended only as a reference and rates offered by local banks or other financial institutions may vary.

- Exchange rates quoted at the foot of the text in ICIS pricing reports are mid-market rates, quoted to two decimal places, applicable on the date of publication. ICIS pricing also offers a real-time currency conversion tool via XE.com, with a click-through link from the pricing reports, to enable subscribers to make quick exchange calculations.
- Exchange rates used for the current day's price assessments in compiling the charts contained within ICIS pricing reports are mid-market rates issued at 01:00 UTC on the date of publication. This preliminary exchange rate is used to allow charts to be produced ahead of 16:00 UTC.
- Exchange rates applied to historical data are mid-market rates issued at 16:00 UTC on the date of publication.
- ICIS China reports use exchange rates from The People's Bank of China (www.pbc.gov.cn) on the day of the report.

ICIS pricing also offers a real-time currency conversion tool, with a click-through link from the pricing reports, to enable subscribers to make quick exchange calculations.

Non-market price adjustments

Non-market price adjustments are necessary on the rare occasions when after careful consideration it is determined that the level of a price assessment is deemed to have become unrealistic. Before any decision is taken to adjust a price level, a broad spectrum of market participants is polled for their views on both the necessity and potential impact of any planned change and its timing.

Once it is clear an adjustment is required, ICIS pricing posts a notice telling subscribers it intends to make the change, and asks for any feedback over a two week period. After two weeks, and if it is decided to proceed, a second notice is posted informing subscribers that the adjustment will be made two weeks later. All price adjustments take place with a minimum four weeks public notice to subscribers.

Once the adjustment has taken place it is prominently mentioned in the price report it applies to. ICIS also adds a note to the online Price History to explain the apparent step-change in prices. It is important to note that price change deltas remain unaffected by any adjustment and the price trend remains accurate.

Contract Price Change Deltas

In some markets, contract settlements - especially quarterly ones - can evolve further after the initial assessment. This may mean that the actual market movement to the next settlement may not be fully aligned with the mathematical difference between the reported prices in one period and the next. In such cases, ICIS may make an editorial decision to publish the new period's price range without including a delta value in the price table. The reasons for doing so and the indications of the actual market movement would be discussed in the text of the report. The delta box in these cases would show as "not assessed" (n/a).

Price history - key changes to methodology for contract prices

ICIS price history has been modified such that contract price assessments now relate to the period to which they apply irrespective of their settlement date. This change has been applied retrospectively to all quotes, including discontinued quotes.

As a result:

For a monthly contract (or quarterly) quote selected as frequency 'C' and downloaded as csv or displayed as a table in the original quoted currency the report date is given as the first of the month (or quarter). For a contract selected as frequency 'C' and displayed as a graph, a 'stepped' chart of the value (or average of the low and high where applicable) is displayed with the steps occurring on the first of the month (or quarter).

For a contract quote selected as frequency 'C' in any currency other than the original a single monthly (or quarterly) value (low, high and average) is displayed. This value is derived using an average of the foreign exchange rates taken at 16:00 UTC (GMT) on each of the publication dates within the month (or quarter). For the current period, the average foreign exchange rates for all the publication dates within the period to date are used.

For a contract quote selected as frequency 'W', the report date is given as the ICIS pricing weekly report publication date – the contract value (low, high and average) applicable to that month (or quarter) is displayed (which, depending on settlement date, may differ from the contract value reported at the time in that week's ICIS pricing report). For a contract quote selected as frequency 'W' and displayed as a graph, a 'stepped' chart is displayed with the steps occurring on the first publication date within the month (or quarter).

For a contract quote selected as frequency 'W' in any currency other than the original, the contract value is converted for each week using the foreign exchange rate taken at 16:00 UTC (GMT) on the publication date.

Where a contract for the current period has not yet settled, no contract value shows in a weekly price history series – price history terminates at the end of the period to which the last settled contract price applies.

Where a contract settles for a future period, it does not display in price history until publication of the first ICIS pricing report within that period.

Where an initial contract value is reported for a period, and subsequently revised, the latter (or latest) value is taken as the contract value for the whole period.
