

ICIS Power Perspective and Power Horizon

Forecasts, insights and impact analyses for the European power markets

ICIS ensures the latest power market and energy policy developments across Europe are put into context for your business. Now you can respond quickly and with confidence to relevant changes, maximise opportunities and protect your profits – ensuring you don't lose out in the short or longer term.

ICIS Power Perspective includes a wealth of knowledge, analysis and insight into current power markets in Europe. **Power Horizon** provides power price forecasting up until 2030.

What's on offer?

Power Perspective

- Detailed, real-time and pan-European coverage of all developments, focussed on the liquid part of the power price forward curve
- Red flag service for regulatory and market changes and their impact on the market, companies and projects
- Existing and looming energy policy affecting power markets
- Combined view of historic and upcoming renewable auctions, capacity and price developments
- Historic capacity, generation and prices of exchange-traded contracts
- Validation of government visions vs. our base case scenario on capacity and regulation out to 2030 and 2050

Power Horizon

- Power price forecasts for EU 28 countries
- EU wide modelling approach with hourly granularity and flexibility until 2030
- Ad-hoc scenario analysis in combination with Power Perspective expertise resulting in a price delta analysis
- Optimal dispatch of generation across all hours and price zones
- Cross border flow forecast
- Interactive marginal costs/merit order data and visualizations

When surveyed, **94% of respondents** told us that understanding policy risk is key for their business.

6 hours per week were spent on screening for new developments and **5 hours per week** on spotting new commercial opportunities.

To understand pan-European regulations, they would need to **translate as many as 24 languages and translating changes into numbers** proved complex and time-consuming.

Power Perspective covers **market and regulatory developments across Europe**, presented in English – so you can understand how changes can impact your business.

Power Horizon feeds **964 million data points** and forecasts the power price for **192.720 hours** in **28 countries**.

How ICIS can help you

Unpleasant surprises

Power markets are difficult to predict, and regulations change quickly – sometimes without warning – which means that an appropriate and timely response is crucial.

Missed opportunities

You need to know which way to jump in order to avoid losing money and credibility. Sometimes surprises present opportunities too – and that's when it's even more important to react quickly and boost your profit line.

You need answers now

Translating regulatory changes into numbers is difficult and time-consuming. Every time change occurs, our experts calculate the market impact and build robust forecasts, offering an expert view of the financial implications, for you to use or compare with your own calculations.

Noise and distraction

Not all news is relevant and even developments that are interesting may not have any real impact. There will always be times when you need an immediate and rational response from a trusted source. ICIS offers that instant back-up, for every European power market, daily.

Our unique approach

Leading experts: We've been leading the way on carbon and gas markets for years, so we are very familiar with the needs of traders, analysts, investors and strategists when it comes to market data and analysis. You can trust ICIS to deliver what decision-makers need – and you can talk to us too.

Always up-to-date: No need to wait days or weeks for a consultant or lawyer's view on legislative or regulatory changes. We report the key information, along with the market impact, within hours. Our power forecasts are updated at least quarterly, as well as each time an important market development takes place.

Insight, analysis and forecasting: Our expertise is not just reporting what is happening. It's about understanding the details behind the policies and power market developments. We provide consistent and comparable coverage, using the same methodology, in English. In addition, our quantitative analysts provide you with a pan-European power price forecast for all EU countries.

Focus on policy: Understanding the detail behind the policies that determine power market success or failure is what we do better than anyone else in the market. Our experts get to grips with the practical impact of evolving policies, which means that you can concentrate on the actions required to build profits.
