

➔ China ETS Insight

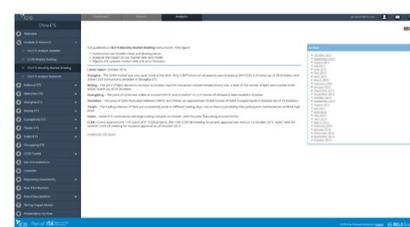

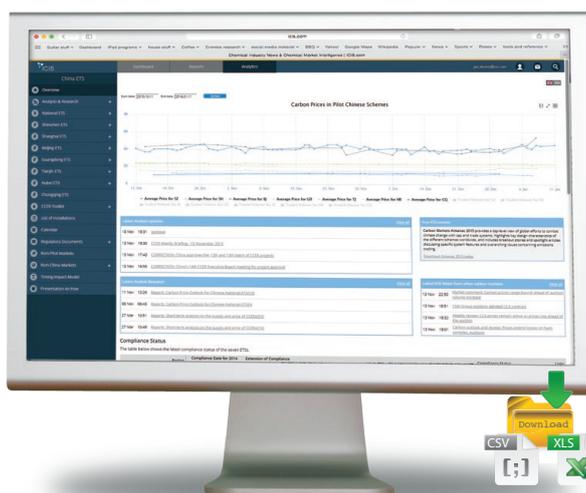

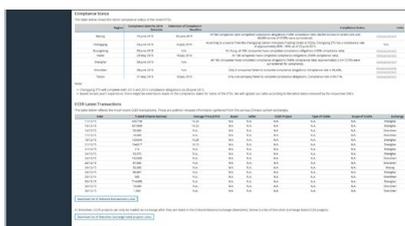

Helping you identify risks, interpret market developments and anticipate price movements

Carbon trading in China

China, the largest GHG emitter in the world, currently has seven pilot schemes, including an offset market. These seven markets combined cover 1.1 billion tonnes of CO₂ emissions per year. What is even more exciting is that China will commence its national carbon trading scheme in 2017, covering approximately 4 billion tonnes of emissions, making it the largest carbon market in the world.

What is it?

The China ETS Portal is a suite of tools designed to help traders understand how prices will evolve as well as the impact of policy changes and market participant behaviour. Available in both English and Mandarin, this comprehensive source of market intelligence includes price forecasts, analyses, research papers and fundamental data covering the forthcoming national scheme, each of the seven Chinese pilot schemes as well as the offset market.

China ETS Insight

The Chinese emission trading scheme (ETS) landscape is evolving fast. Therefore, market participants need to ensure they stay compliant, understand the risks and opportunities presented by changes in the schemes as well as preparing for the forthcoming national scheme.

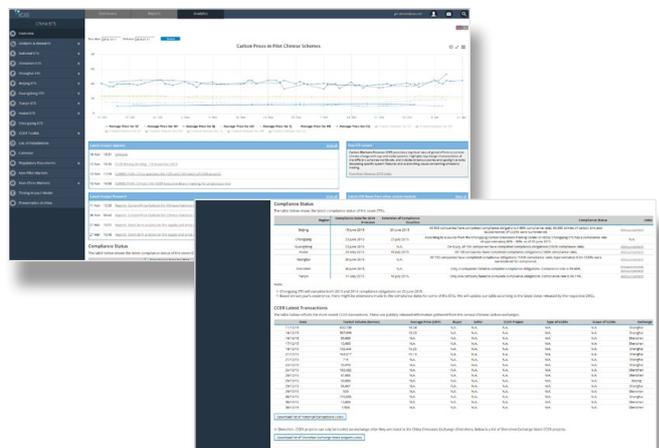

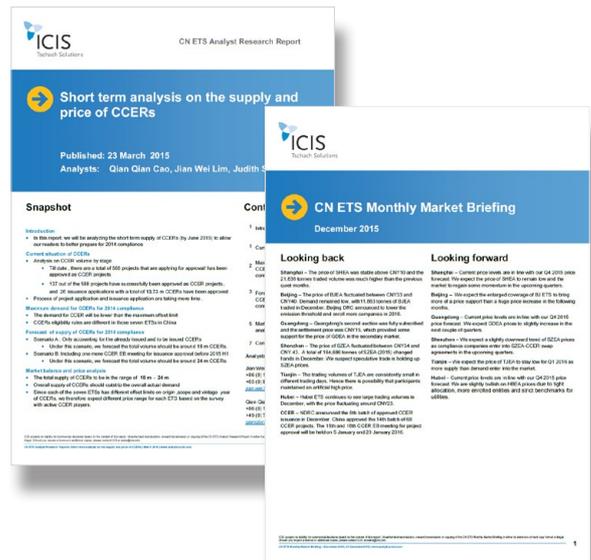

What can it do for me?

As independent market intelligence, ICIS digs deeper behind the headlines to tell you what they mean for the major industries involved and explain the impact on allowance prices, offset prices and liquidity. Furthermore, our analysis is underpinned by our robust, trusted analytical approach (Timing Impact Model) which we've already applied successfully in the European and US carbon markets.

We also draw on our global experience to help you spot trends and risks early. We've been there as other carbon markets have evolved so we know exactly what to look for.

What do we offer you?

- Time saving, actionable analyst updates that explain the impact of policy, regulatory and market developments
- Transparent, behaviour-driven price forecasts for China's pilot schemes
- A monthly market briefing to explain why the market reacted the way it did
- Research reports providing an in-depth look into a single key issue affecting China's seven pilot schemes, in order to help clients make sense of the market impact over time
- Access to our bilingual team of analysts available by email, phone or wechat
