

Instant Carbon Market Opportunities

ICIS is the only dedicated carbon market intelligence provider to provide instant, valuable insights in the fast-moving trading world via proven behavioural modelling. These facilitate quick reactions, informed trades and a ROI in a matter of seconds.

Solutions suite for generating profit

We invest in getting it right

Prices are influenced every second and our solutions allow instant interpretation and action. Where some providers cut down on the quality of insights and technology investments to cut costs, ICIS makes speed and accuracy a priority. Our solutions highlight risks and foresee negative developments that could impact your business.

The **short-term indicator model** provides a cumulative revenue of €14.20. If one would have traded 1 EUA based on our forecast every day in 2016, average invested capital of €26.80.

Our customer tell us that they are able to **make trading decisions in a matter of seconds** based just on the headlines and market impacts we provide.

We are always innovating. ICIS is the only market intelligence provider to analyse over **6m emission allowance transactions** from the EU emissions transaction log on a **company level**.

ICIS carbon research reports contain **hundreds of analyst work hours condensed into less than 8 pages**.

We keep you one step ahead of the competition

With our solutions, you are better equipped to recognise patterns, predict trends and take action quickly and confidently. We keep you one step ahead of the competition by anticipating their behaviour – which means you will know how they are likely to act in the market.

We don't rely on fundamentals, we innovate them

The ICIS TIM (Timing Impact Model) is the first of its kind. By capturing utility hedging rates and the banking behaviour of industrials, our unique modelling forecasts the true market balance (or 'traded balance'), enabling you to trade ahead of the curve and better understand the risk exposure of your trades.

Our solutions support rapid profitable decisions

Our short-, mid- and long-term price forecasts and 'info boxes' compress hundreds of sources and policy pages into scalable, consistent and intuitive information. Our extended network of market participants, on the trading as well as on the political side, ensure the accuracy of our insights thereby, helping you to invest with confidence.

ICIS Offering

Our portfolio accommodates the **changing needs of trading teams** by providing access to valuable resources and product capabilities, enabling you to make quicker and more confident trading decisions.

Keep an eye on...

China, the largest greenhouse gas (GHG) emitter in the world, currently has seven pilot schemes including an offset market. These seven markets combined cover 1.1bn tonnes of CO₂ emissions per year. What is even more exciting is that China will commence its national carbon trading scheme in 2017, covering approximately **4bn tonnes of emissions**, making it the largest carbon market in the world.
