ICIS Long-Term Power Analytics
Forecasts, insights and impact analyses for the European power markets

ICIS ensures the latest power market and energy policy developments across Europe are put into context for your business. Now you can respond quickly and with confidence to relevant changes, maximise opportunities and protect your profits – ensuring you don’t lose out in the short or longer term.

ICIS Long-Term Power brings you a wealth of knowledge, analysis and insight into current power markets in Europe. Thanks to our Power Horizon model, we are able to provide you power price forecasting up until 2030.

What’s on offer?

New Features
- Full integration of power and carbon modelling to produce one integrated forecast
- Power price forecasts for EU 28 countries plus Switzerland and Norway, with a hourly granularity
- A pan-European coverage of all developments across power markets, supporting you in understanding how a market development in one country affects the whole region
- Red flag service for regulatory and market changes and their impact on the market, companies and projects
- In one unique portal you have a combined view of historic and upcoming renewable auctions, capacity and price developments
- Thanks to the new features added, you now have full visibility of capture prices per technology and region

What can you do with it
- EU wide modelling approach with hourly granularity and flexibility until 2030, with a detailed view of the optimal dispatch of generation across all hours and price zones
- Understand and quantify the impact of major policies and structural changes on the market
- Analyse and forecast the value of your asset in a specific market
- Evaluate the revenue and the price risk connected to your investment
- Evaluate and understand the price risk connected to long-term contracts (PPAs)
- Source for relevant opportunities in terms of new investments/ M&A across all European power markets

Quantify the policy risk
When surveyed, 94% of respondents told us that understanding policy risk is key for their business.

Support you understanding what matters for your business
The average company spends 6 hours per week screening for new developments and 5 hours per week on spotting new commercial opportunities.

Save time on translation
Power Perspective covers market and regulatory developments across Europe, presented in English – so you can understand how changes can impact your business.

Powered by Data
Our Power Horizon model feeds 964 million data points and forecasts the power price for 192,720 hours in 29 countries.
How ICIS can help you

Unpleasant surprises
Power markets are difficult to predict, and regulations change quickly – sometimes without warning – which means that an appropriate and timely response is crucial.

Missed opportunities
You need to know which way to jump in order to avoid losing money and credibility. Sometimes surprises present opportunities too – and that’s when it’s even more important to react quickly and boost your profit line.

You need answers now
Translating regulatory changes into numbers is difficult and time-consuming. Every time change occurs, our experts calculate the market impact and build robust forecasts, offering an expert view of the financial implications, for you to use or compare with your own calculations.

Noise and distraction
Not all news is relevant and even developments that are interesting may not have any real impact. There will always be times when you need an immediate and rational response from a trusted source. ICIS offers that instant back-up, for every European power market, daily.

Our unique approach

Leading experts: We’ve been leading the way on carbon and gas markets for years, so we are very familiar with the needs of traders, analysts, investors and strategists when it comes to market data and analysis. You can trust ICIS to deliver what decision-makers need – and you can talk to us too.

Always up-to-date: No need to wait days or weeks for a consultant or lawyer’s view on legislative or regulatory changes. We report the key information, along with the market impact, within hours. Our power forecasts are updated at least quarterly, as well as each time an important market development takes place.

Insight, analysis and forecasting: Our expertise is not just reporting what is happening. It’s about understanding the details behind the policies and power market developments. We provide consistent and comparable coverage, using the same methodology, in English. In addition, our quantitative analysts provide you with a pan-European power price forecast for all EU countries.

Focus on policy: Understanding the detail behind the policies that determine power market success or failure is what we do better than anyone else in the market. Our experts get to grips with the practical impact of evolving policies, which means that you can concentrate on the actions required to build profits.
