

Sirrus web empowers agronomic teams to strengthen relationships with growers through operational and relational efficiency. Advisors can easily perform their agronomic services, create recs for each field, and make data-driven decisions on a platform built upon standardized data.

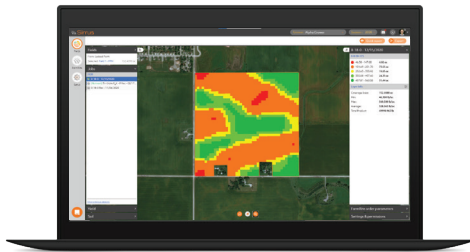

FARMRITE

Sirrus web features FarmRite ordering for easy order placement, anytime, anywhere without having to return to any desktop software. With a status bar to show you where your order is at in the process, you can easily manage every order, and address any issues that may occur.

REC EDITOR

With the Rec Editor in Sirrus web, you can adjust your Fertilizer rates by total product, average rate, total cost, (and more!), allowing you to make timely edits to your FarmRite Recs. Sirrus can also generate machine files for your FarmRite Fertilizer Recs that you can provide directly to your growers.

FIELDS MODULE

View and analyze all of your data for each Field within the Fields Module. You can quickly and easily view a summary of Yield data, Soil Sampling, FarmRite Fertilizer and Nutrient Recs, as well as Soil Surface Analysis and Yield Surface Analysis data.

YIELD AND AS-APPLIED IMPORTING

With Sirrus web, it's easy to import your As-Applied and Yield data. Sirrus will process the files for you and add them straight to your account. If there happens to be any necessary input on your files, you'll notice indicators where your input is needed.

THIS ISN'T ALL! WITH SIRRUS WEB YOU CAN:

- Edit Yield data
- Create Rec Quick Maps
- Sync with agX
- Export Recs via SHP file
- Import Field boundary SHP files
- Enable Multi-user functionality
