Armley Gyratory

Current situation

Connecting Leeds

Leeds City Council

Armley Gyratory is a busy roundabout controlled by traffic lights, to the west of Leeds city centre. It is a key junction on the Inner Ring Road and a major entry/exit point for traffic travelling through and into the city.

Queuing traffic builds up quickly at busy times of day, resulting in delays for motorists and bus users. This congestion contributes towards poor air quality and has a negative impact on local residents and businesses.

The current pedestrian and cycle facilities at the junction are uninviting. As a result, people from surrounding communities are unlikely to make journeys on foot or by bike into the city centre. When they do, some use a variety of informal routes around the junction.

Scheme aims

Connecting Leeds, in partnership with the West Yorkshire Combined Authority, has developed a design for an improved junction. This design supports the council's vision for a more liveable, connected city centre. It will complement and enable wider improvement projects in the city, providing an opportunity to create better public spaces.

The scheme will improve the operation of the junction and provide more space for cyclists and pedestrians. It will also improve the local environment around the new junction through tree planting and new landscaping.
