

Introduction

Have not found the perfect topic your thesis yet? But you would like to experience the workings of one of the largest Dutch engineering consultancies? Get in contact with Witteveen+Bos.

Goal of thesis research

We are continuously looking for highly motivated and talented students from the Delft University of Technology. Each year over one hundred students are doing an internship or a MSc thesis project at Witteveen+Bos. The preferred focus is on a geotechnical subject, but many related topics are possible. We strive to find the best match between supervisors and thesis subject. Many of our engineers have guided students through their MSc thesis projects. This has often proved to be a successful collaboration for both the student and Witteveen+Bos.

Witteveen+Bos

Witteveen+Bos is an engineering consultancy operating in ten countries. It is one of the ten largest engineering companies in the Netherlands, with approximately 1100 employees. We offer our clients top quality advice and state of the art designs regarding water, infrastructure, construction and the environment. Our engineers are pioneers in their field, working on the Amsterdam North-South line, the Jakarta Master Plan and closing the Antwerp Motorway Inner Ring (Oosterweel).
