

## Release Notes

### ***ClearDB* Documenter 5.0.1 (build 437)**

#### **IMPROVEMENTS**

- **Core**
  - *ClearDB* Documenter can now connect to Oracle Databases 18c.
- **Installer/Updater**
  - When the application is being updated or a new version is being installed, and there's the other instance running, the user is now prompted to save changes (if any) and close it to continue the update/installation.

#### **BUGS FIXED**

- **Database Documentation**
  - The Security Audit section is no longer superfluously added to a database report after it is actualized.
  - Moving back to the previous page in a database report now works correctly.
- **Comparison**
  - Entering a wrong password for one of the protected database reports selected for comparison now triggers a correct error message.
  - Comparing two database reports no longer raises an error.
- **CRUD Matrices**
  - Links that follow to stored objects from the CRUD2 type Matrix page now work correctly in a database report.
  - Clicking a link of a stored object name on the "CRUD2 type Matrix" page no longer raises an error "The page cannot be found!" in a comparison report.
  - No objects are now missing from the "CRUD2 type Matrix" page.
- **Code Analyzer**
  - The CURRENT keyword used as a parameter name no longer causes a parser error.
- **Code Analyzer Options**
  - The filter on the Code Review Options page is no longer hidden when DPI 125% and higher is applied.
- **Database Security Audit**
  - Generating a standalone Database Security Audit report no longer triggers the Code Analyzer Options Notification message.
- **Generation Status and Log**
  - The progress bar now appears correctly when generating a database report with the Security Audit for the first time.
- **Generation Options**
  - The option "Synchronize selection of Title / Author / Comments fields" now works correctly.
- **Templates**
  - A template generated in the 32-bit version of *ClearDB* Documenter is no longer marked as modified when loaded to the 64-bit version.
- **Installer/Updater**
  - Fixed the possibility to select data for deletion when uninstalling the application.
- **Online Support Desk (OSD)**

- The values in the “Country” and “Company” fields are no longer mixed up in the preview mode.
- Searching for OSD messages by a text occurrence no longer triggers an access violation error. The error occurred in the 64-bit version only.
- **Preferences**
  - Checking for product updates from the file system no longer checks for new OSD messages.
