

Release Notes

ClearDB Documenter 5.0.1 (build 467)

IMPROVEMENTS

- **Core**
 - The total number of jobs and templates is now shown in the main window next to the corresponding options.

BUGS FIXED

- **Core**
 - Fixed the error message that is shown on trying to install the 64-bit version of the application on 32-bit Windows.
- **Documents**
 - The footer is no longer glued.
 - Fixed text wrapping in the tables of the “DB & PL/SQL Observations” page.
- **Database Documents**
 - Subpages of views are now opened with correct titles.
 - Fixed the titles of the “Docu Options” and “Comparison Options” pages.
 - Fixed the layout of tables on the “Docu Overview” page.
- **Docu Comparison Report**
 - Java class objects that exist in a source document are no longer treated as newly created.
- **Database Object Tree**
 - The error “List index of bounds” no longer occurs on pointing to the nodes of the object tree when a template is loaded.
 - An access violation no longer occurs on breaking the tree loading process.
- **Templates**
 - A template now gets modified after disabling generation of a security audit report.
 - Items that do not exist in a database but are included in a template are now marked in red in the Database Object Tree when the template is loaded.
 - A template now gets modified after changing values of the “Object synonyms” option.
 - A database name saved in a template is now shown on loading a template even though this connection is no longer valid.
 - The expand/collapse icons are no longer shown for non-accessible schemas loaded from a template.
- **Code Review Rules**
 - The rule “Unreferenced local variable” is no longer triggered in a compound trigger for the variables that are used in the code.
- **Code Analyzer**
 - Code analysis no longer fails when the DBMS_JOB package is included in the report.
- **Code Analyzer Options**
 - Disabling rules in Code Analyzer Options now affects the corresponding groups of rules on the Code Audit tab in Docu Content Options.
- **Call Trees**

- Pinned Call Tree pop-up windows no longer move down on switching objects in a CRUD matrix.
- Clicking “Locate in source code” now shows all relevant links.
- Cyrillic characters are now shown correctly in the Call Trees opened from CRUD matrices.
- **R&D Diagrams**
 - R&D diagrams are now shown without issues when subnodes are disabled in the Docu Tree.
- **ER Diagrams**
 - Disabling ER diagrams for tables no longer affects the generation of diagrams at the DB and Schema level.
- **Database Security Audit**
 - The option “Security Audit Comparison Report” is no longer available in the 64-bit version of the application.
- **docuVIEWER**
 - The highlight no longer jumps to another item on refreshing the list of documents.
 - Fixed the zoom feature.
- **DB Connection Window**
 - The error “Unspecified Oracle client error. Change connection options and try again.” no longer occurs after changing the database connection to a new one when a template is loaded.
- **Job Manager**
 - Disabled all prompts during job execution in the hidden mode.
- **Preferences**
 - The current license key name is no longer shown in the file explorer opened from Preferences.
