

Release Notes

ClearSQL 7.1.2 (build 187)

NEW FEATURES

NEW: Support for Oracle Databases 18c.

IMPROVEMENTS

- **Analyzer View**
 - Code Review tab: The number of suppressed rule violations is now shown next to code review categories and in the hints.
- **Diagrams (Flowcharts, Call Trees)**
 - Removed the creation time of a diagram from the diagram's header.
- **Summary Info**
 - Removed a project name from paths of items selected in the Project Tree.

BUGS FIXED

- **Project Tree**
 - Loading a project in one *ClearSQL* instance after closing the other instance where this project was loaded now works correctly.
 - A copied project is no longer loaded to the Project Tree automatically. The user is now prompted to load the project after it is copied.
 - The Project Tree is now refreshed automatically after linking/unlinking items in the Link Manager.
- **Code Analyzer**
 - An access violation error no longer occurs after analysis when the All Call Tree tab is active and the Project Tree is filtered in such a way that no scripts are shown.
 - *ClearSQL* no longer hangs during analysis of big scripts.
- **Code Analyzer Options**
 - The error message that appears on trying to save Code Analyzer Options to a read-only file are no longer duplicated.
- **Code Synchronization**
 - Comments generated by *ClearSQL* no longer disappear after a script is synchronized with its source.
- **Instrumented Code**
 - DML statements are no longer ignored by Instrumented Code.
- **CRUD Matrices**
 - Tables without DML operations are no longer shown in the object tree of CRUD2 matrices.
- **Project Report**
 - Clicking a block of a Call Tree diagram no longer causes its title to move.
