

Release Notes

ClearSQL 7.0.4 (build 372)

IMPROVEMENTS

- **Core**
 - The process of updating the structure of the Demo Project is now indicated with a progress bar.

BUGS FIXED

- **Code Analyzer**
 - The rule “The variable was not modified anywhere in the code. Declare it as a constant.” no longer raises a violation for variables used as function parameters.
 - Parsing a query containing a factoring clause and parentheses around the main query no longer raises errors.
 - Parsing an XMLTABLE function no longer raises errors if the column datatype is missing in the XML_table_column.
 - Conditions of the WHERE clause such as $X = (\text{subquery}) + Y$ are now correctly recognized by the parser.
- **Code Review Rules Editor**
 - Inserting an XML node attribute from the XPath Code Insight now works correctly.
 - Filtering by a node name now works correctly in the Code Insight for XPath.
- **Project Analysis**
 - Sped up generation of script history snapshots during a project analysis.
- **Project Tree**
 - Multiple selection now works correctly in the Project Tree.
- **Link Manager**
 - An access violation no longer occurs on trying to open the Link Manager once again while it is being loaded. The error occurred for big projects only.
- **Job Manager**
 - The main instance of *ClearSQL* no longer gets blocked if an error occurs while running a job in the other instance.
