About CCMP

- Program runs in 8 blocks with different malaria transmission intensity in Odisha.
- Program carries out malaria intervention and control activities.
- App developed for Medicines for Malaria Venture (MMV) by HISP India, the National Institute of Malaria Research (NIMR) and National Vector Borne Disease Control Programme (NVBDCP).

Successes

- Easy availability of data for analysis and planning.
- Improvement of data quality by avoiding duplicates and validation checks.
- Identification of malaria relapse cases.
- Importation of the aggregate and tracker data for data reporting in areas with low internet connectivity.
- Automation of the entire process of calculating indicators and generating reports.
- Graphical and spatial analysis using GIS to identify the geographic factors affecting malaria incidence.
- Automated generation of report cards comparing key indicators over a period of time to help identify the effectiveness of the programme.
