PROTECT & RESPECT
YOURSELF & EACH OTHER

Condoms can reduce the risk of HIV transmission.
Always use condoms from a relaible brand.
A full strength condom (with lubricant for anal sex) is recommened

REMEMBER

HIV can only be passed on throught body fluids (blood, seman etc.)
For the virus to be passed on, it has to be:

1. **In someones body**
2. **Get out of someones body**
3. **get into someone elses body**

Condoms act as a barrier to prevent this from happening.
