

Introduction

This document describes how to install the Cybsafe app on your Okta account.

Note: This app does not replace your current Cybsafe SSO app.

Requirements

To use this service you will first need to be registered with Cybsafe and obtain an **API Token**.

Please contact support at: support@cybsafe.com to register or obtain an API Token.

Supported Features

Pushing New Users

New users created through Okta will also be created in Cybsafe if they are assigned to one of the Push Groups.

Pushing Profile Updates

Changes made to a user profile in Okta will also be updated in Cybsafe. This includes first name, last name, email, department, job title and manager changes.

Pushing User Deactivation

Deactivating the user in Okta will also deactivate the user in Cybsafe. Deactivation in Cybsafe will also occur if the user is removed from the Push Group that has access to the Cybsafe application.

Pushing New Groups

Groups that have the Cybsafe app assigned to them will be created within the Cybsafe app.

Pulling Users

Importing users from Cybsafe to Okta is not currently supported.

Pulling Groups

Importing groups from Cybsafe to Okta is not currently supported.

Step-by-Step Configuration Instructions

Step 1: Add the Cybsafe app to your Okta account

- i. Navigate to **Applications** then click **Add Application**

- ii. Enter "Cybsafe" into the search box and click **Add** on the Cybsafe app listing

- iii. Tick your settings options as required and hit **Next**

iv. Select your sign-in options as required and hit **Done**

Add Cybsafe

1 General Settings 2 Sign-On Options

Sign-On Options · Required

SIGN ON METHODS

The sign-on method determines how a user signs into and manages their credentials for an application. Some sign-on methods require additional configuration in the 3rd party application.

Application username is determined by the user profile mapping. [Configure profile mapping](#)

i Secure Web Authentication is the only sign-on option currently supported for this application.

- Secure Web Authentication
- User sets username and password
- Administrator sets username and password
- Administrator sets username, user sets password
- Administrator sets username, password is the same as user's Okta password
- Users share a single username and password set by administrator

CREDENTIALS DETAILS

Application username format:

Update application username on:

Password reveal: Allow users to securely see their password (Recommended)

Step 2: Configure the Cybsafe app integration settings

- i. Navigate to the **Provisioning** tab and click **Configure API Integration**

- ii. Tick **Enable API Integration** then enter the **API Token** you were provided with

- iii. Click **Test API Credentials** to confirm the connection was successful then **Save**

Step 3: Adjust To App settings from the Provisioning menu

1. Navigate to the **To App** tab in the **Provisioning** menu then click on **Edit**

2. Tick **Enable** on the features required

Note: Cybsafe does not support the Sync Password feature.

3. Hit **Save**

You may now begin assigning your users and groups to the Cybsafe app.

Troubleshooting & Tips
