

# BACKUP & RECOVERY FOR OFFICE 365

COMMVAULT®

## Overview

We all know that Microsoft® Office 365™ helps companies with advanced productivity tools including Exchange™ Online, SharePoint™ Online, Azure Files and OneDrive™ for Business. But what about protecting all that critical data you're working with in the cloud? Did you know that keeping Office 365 data safe and compliant is your responsibility? How do you ensure your data will be protected, accessible and recoverable if something goes wrong? What is the best way to keep migration costs and timelines under control? How will you maintain compliance with GDPR and other government and business regulations?

You need a way to ensure business continuity, meet service level agreements, and preserve data compliance from mishaps like human error, data corruption, or malware attacks. Commvault has the tools you need to supplement and extend Office 365 capabilities should the worst happen.

## Microsoft Office 365 Challenges

- Migration of large on-premises Microsoft Office™ environments may be very time consuming and costly
- There is no native backup and recovery service provided with Microsoft Office 365
- Collaboration files are at risk due to accidental deletion, corruption, or malicious attacks such as ransomware
- Ensuring the protection and retention of the data remains compliant with regulatory obligations

## Solution

Commvault helps you maximize and protect your Microsoft Office 365 investment by providing a comprehensive platform that delivers the best in backup, recovery, archiving, search and discovery across on-premises and cloud locations. Commvault for Office 365 saves time, money and resources by delivering widespread protection and enabling faster migration of data throughout your journey to the Microsoft Cloud.

## Highlights

Commvault gives you control of your data, and helps you gain additional value from your Microsoft Office 365 investment by:

- Policy-driven data protection and recovery of Exchange Online, SharePoint Online, Azure Files, OneDrive for Business, Yammer, Skype and Project Online.
- Making certain you can complete your migration of on-premises Exchange Mailboxes to Office 365 quickly and efficiently through the archiving of redundant, outdated, and trivial data, allowing you to migrate only recent and business-critical data.
- Providing heterogeneous data governance and ensuring regulatory compliance through all-inclusive proactive data collection, and high-speed search and discovery of data across Office 365, on-premises, and multi-cloud environments.
