

Noonic Creative Office - Call for entries

Brief

Summary

Noonic and Desall present "**Noonic Creative Office - Call for Entries**", an interior design contest aimed at developing a concept for the new headquarters of Noonic, which will serve both as operating area and hosting space for events and project presentations.

Description

Noonic is a young and internationally-oriented creative studio for research and software development, where innovative ideas find their way, through the joint effort of developers, artists and creatives. Currently Noonic has the company center near Venice, North-East of Italy and an operative office in the Technopark of Trivandrum, India.

The aim of the contest is to create a project for its new headquarters and a space planning proposal for the interiors. It will host both the operating area for the web and mobile developers and creatives and an additional space for events, project presentations and meetings with customers.

The structure will employ prefab boxes, with timber sheathing (fir) and plasterboard partitions. The boxes might either be combined (by the short or the long side) or be used individually and connected through an external wooden pavement. They will be hosted by a farming company in a green area and accessible from a parallel alley – the opposite side of the structure will stay hidden (download the material files for more details about the location).

Guidelines

The budget for building materials, assembly, installation and setup is 30 000 € and structure must include at least the following spaces:

- an entrance with Noonic sign and an area for water dispenser and coffee machine;
- one room for developers / graphics (about 6 workstations) which might be an open space accessible from the main or a different entrance;
- one meeting room (that can be closed and should ensure privacy to the users);
- one private office (2 workstations).
-
- The headquarters will share some of the existing spaces with the nearby farming company, such as parking and restroom. Therefore it is NOT necessary to include them in the project.

For the details please refer to the attached material files.

Timeline

Upload phase: 23rd July 2013 - 12th September 2013

Community vote: 13th September 2013 - 19th September 2013

Winner announcement: 29th September 2013 (approximately)

Awards

1st prize: 500,00 € (*five hundred euro*)

The name of the winner will be mentioned next to Desall in a plate at the entrance.

During the construction Noonik will shoot a stop-motion video that will be published in the social networks – the winner will be mentioned in the credits as well.

Revision 09 Aug '13

In order to help you better develop the planning for the arrangement of the containers, please consider that the construction site area measures altogether 15 x 30 metres. In addition, containers cannot be arranged one above the other, but they can be combined by the short or the long side – which means, that once combined they share an overall area equal to the area of both containers together. Ex. If we combine two containers, we have: $2 \times (2,44 \text{ m} \times 6,10 \text{ m}) = 29,768 \text{ sqm}$ – there are no walls in between. In your proposals, please remember also to include the arrangement for the furniture needed for each room according to its function. Ultimately, consider the budget provided in the brief only as approximate.
