

Digital Health Special Report/ Forward Features List 2017

Digital Health runs special reports on specific aspects of healthcare IT throughout the year. After nearly 10 years of delivering an informed outlook across the most important topics of Healthcare technology, we have made some changes that will ensure Special Reports keep delivering insightful, independent editorial and value for our supporting suppliers.

January 23rd: Shared Care Records

Digital Health look into access to patient records and their sharing across health settings.

Feb 20th: Imaging PACS

As Health organisation look to get more from their imaging investment, Digital Health continues its series on imaging with a look at what the next steps could be.

March 6th: Digital Patient

Wearables, self-services and engagement will be the focus for this year's view.

April 10th: Pathology

Pathology continues to be a system that can deliver patient safety and financial benefits. What are you doing to help organisations make the right decisions to improve workflow.

May 8th: Document Management

In search of paperless requires a good document management procedure and software system that support news ways of working and delivery across multiple care settings.

June 12th: E-Prescribing

The focus on e-prescribing has not gone away. New money and new systems need to be procured and used effectively, how are you going to help.

July 10th: Observations & Vital Signs

Several trusts are still without observations and vital signs in wards and across the enterprise. A number are have not automated their NEWS and MEWS and the opportunity is now.

24th: RIS

Organisations now see a time to change systems and demand more from them. How are you getting your market share?

August 7th: Professional Development

As the market looks to upskill and change, new questions are emerging on accreditation, courses, skills gaps and knowledge transfer. How can you help senior executives and their teams progress to the next step?

September 11th: Infrastructure as a Service

As streamlining and higher demands of infrastructure grow alongside more and more data, discussions on what benefit cloud can bring and how, need guidance from suppliers on how to break the tech stack down to an efficient fit for purpose underbelly.

October 23rd: VNA

Still a step behind other countries, but a growing area of interest and procurement, what VNA should be used and how will it deliver benefits across imaging and the wider storage piece.

November 13th: Interoperability

The topic of 2016 and the topic of 2017. Collaboration and efficiency can only be realised through interoperability. How are you helping the NHS realise new ambitions and needs?

27th: Software as a Service

Faster, smarter, better! As new ways of working develop, new demands on cloud based software are growing. How are you helping mobilise change?

Only suppliers formally booked in 4 weeks before publication will be contacted by the author for possible contributory content!
