

Software developer

Lendino is Denmark's first crowdfunding platform for company loans. We have created a "crowdfunding platform as a service" (CPaaS) system that makes it fast and easy for organizations to get their own crowdfunding platform. The solution is called *Smallbrooks*, and our ambition is that Smallbrooks becomes the global standard for crowdfunding platforms. In order to achieve that, we need your help!

The job

You will be part of the continued development of Smallbrooks and will be involved in all stages of development: from discussing new features and architectural design to development, test, deployment and support.

The technologies/concepts we use regularly include (but are not limited to):

- Java, Scala, Javascript
- Play! Framework, Akka, ReactJS
- GraphQL, event-sourcing, actor model
- PostgreSQL, MongoDB
- Jenkins, Heroku, AWS

While experience in any of these is a plus, we don't require it. We are looking for generalists and value general problem-solving skills. The only thing you should bring is curiosity and eagerness to learn.

Your profile

We expect that you have

- several years of practical experience with software development;
- excellent problem solving and analytical skills;
- strong communication skills in English;
- a good sense of humor and the ability to thrive in the sometimes chaotic environment of a start-up.

In addition, it would strengthen your application if you

- have experience with JVM languages (Java, Scala, etc.);
- have experience with (or interest in) functional and reactive programming;

- have experience with (or interest in) optimizing systems for concurrency and scalability;
- are familiar with domain-driven design, event sourcing and/or the actor model.

The company

Lendino has been in operation for about five years, but the Smallbrooks solution has only existed for about a year. Although you will formally be employed by Lendino, you will see Lendino as one of many customers using the Smallbrooks solution.

In a sense, the Smallbrooks team is a company within the company, and you will take part in forming the Smallbrooks culture. There are 10 employees in Lendino and about half of them work with Smallbrooks. There is no extended hierarchy, and your opinion is just as valuable as that of anyone else.

By working for us, you become part of the ongoing revolution in FinTech where large, old corporations are being challenged by small, agile players that are able to use technology to leverage the crowd and scale their business. We are convinced, that our efforts contribute to creating a financial system that is more transparent and sustainable.

Interested?

Apply through [LinkedIn](#) or send your application containing cover letter, CV and relevant documents to apply@smallbrooks.com. If you are a newly graduate, please also submit your transcript with grades.

Interviews will be held continuously until a suitable candidate has been found. If you have any questions, please don't hesitate to contact us:
