

# Care Quality Commission

## Inspection Evidence Table

### Sheringham Medical Practice (1-581430608)

Inspection date: 9 August 2018

Date of data download: 8 August 2018

## Safe

### Safety systems and processes

Safeguarding	Y/N
There was a lead member of staff for safeguarding processes and procedures.	Y
Safety and safeguarding systems, processes and practices were developed, implemented and communicated to staff.	Y
Policies were in place covering adult and child safeguarding.	Y
Policies were updated and reviewed and accessible to all staff.	Y
Information about patients at risk was shared with other agencies in a timely way.	Y
Systems were in place to highlight vulnerable patients on record. There was a risk register of specific patients	Y

Medicines Management	Y/N
The practice held appropriate emergency medicines and risk assessments were in place to determine the range of medicines held.	Y
The practice had arrangements to monitor the stock levels and expiry dates of emergency medicines/medical gases.	Y
There was medical oxygen on site.	Y
The practice had a defibrillator.	Y
Both were checked regularly and this was recorded.	Y

Safety Alerts	Y/N
There was a system for recording and acting on safety alerts	Y
Staff understand how to deal with alerts	Y

## DO NOT DELETE THE NOTES BELOW

### Notes: CQC GP Insight

GP Insight assesses a practice's data against all the other practices in England. We assess relative performance for the majority of indicators using a "z-score" (this tells us the number of standard deviations from the mean the data point is), giving us a statistical measurement of a practice's performance in relation to the England average. We highlight practices which significantly vary from the England average (in either a positive or negative direction). We consider that z-scores which are higher than +2 or lower than -2 are at significant levels, warranting further enquiry. Using this technique we can be 95% confident that the practice's performance is genuinely different from the average. It is important to note that a number of factors can affect the Z score for a practice, for example a small denominator or the distribution of the data. This means that there will be cases where a practice's data looks quite different to the average, but still shows as comparable, as we do not have enough confidence that the difference is genuine. There may also be cases where a practice's data looks similar across two indicators, but they are in different variation bands.

The percentage of practices which show variation depends on the distribution of the data for each indicator, but is typically around 10-15% of practices. The practices which are not showing significant statistical variation are labelled as comparable to other practices.

N.B. Not all indicators in the evidence table are part of the GP insight set and those that aren't will not have a variation band.

The following language is used for showing variation:

	Variation Band	Z-score threshold
1	Significant variation (positive)	$Z \leq -3$
2	Variation (positive)	$-3 < Z \leq -2$
3	Comparable to other practices	$-2 < Z < 2$
4	Variation (negative)	$2 \leq Z < 3$
5	Significant variation (negative)	$Z \geq 3$
6	No data	Null

Note: for the following indicators the variation bands are different:

- Child Immunisation indicators. These are scored against the World Health Organisation target of 95% rather than the England average.

It is important to note that z-scores are not a judgement in themselves, but will prompt further enquiry, as part of our ongoing monitoring of GP practices.

Guidance and Frequently Asked Questions on GP Insight can be found on the following link:

### Glossary of terms used in the data.

- **COPD:** Chronic Obstructive Pulmonary Disease
- **PHE:** Public Health England
- **QOF:** Quality and Outcomes Framework (see <https://qof.digital.nhs.uk/>).
- **RCP:** Royal College of Physicians.
- **STAR-PU:** Specific Therapeutic Group Age-sex weightings Related Prescribing Units. These weighting allow more accurate and meaningful comparisons within a specific therapeutic group by taking into account the types of people who will be receiving that treatment. (See [NHS Choices for more details](#)).
