

Next Generation Opalite™ – Crystalite™ is a DTS exclusive

## The Zirconia (R)evolution

Translucent like a lithium disilicate - strength like a zirconia

A material perfect for aesthetic treatments in the anterior and posterior tooth region

The logo for DTS, consisting of the letters 'DTS' in a bold, white, sans-serif font, positioned in the bottom left corner of the page. The background behind the logo is a blue curved shape that also frames the right side of the advertisement.

DTS

The Crystalite crown is a material revolution for dentists who love aesthetics and excellence.

A highly biocompatible material with outstanding transparency. Crystalite combines the known positive properties of zirconia with a significant increase in translucency as is known from lithium disilicate materials like IPS e.max. Available in up to 4 unit bridges and in all VITA shades, this new full contour zirconia changes the way we create beautiful restorations.

## Crystalite Facts:

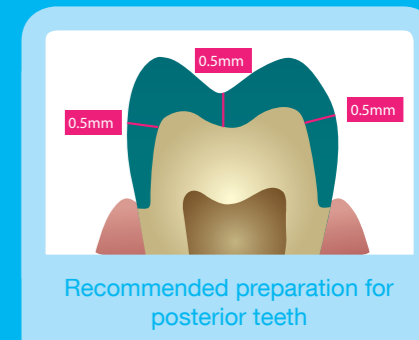

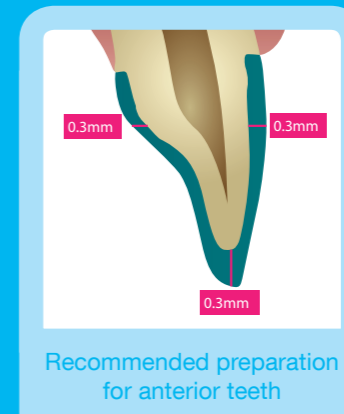

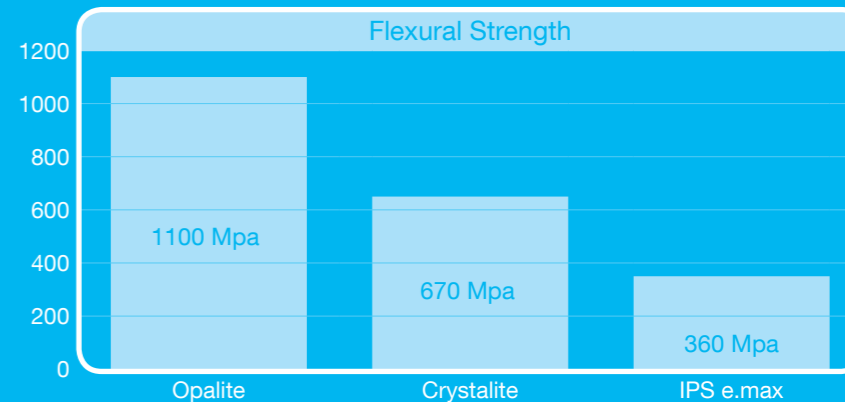

### Indications:

- Crown
- Inlays/onlays
- Veneers
- Bridges up to 3 to 4 units depending on span
- Implant Abutments
- Screw retained implant crowns

### Advantages:

- Perfect for use with oral scanners
- As designed and manufactured using CAD (computer aided design) the restorations are more accurate than any traditionally made restoration with perfect marginal fit. The consistency of the product is almost 100% accurate
- Highly aesthetic due to its super high translucency
- Fully metal free economical restoration

|                     |   |
|---------------------|---|
| <b>Material:</b>    | Monolithic super translucent zirconia                                     |
